Regional Service District 1

Regional Service District 1 – Profile

- Located in the northwest part of the province, this region, which includes the area served by the COGERNO Solid Waste Commission, and a portion of the Valley Solid Waste Commission, is characterized by urban, suburban and rural settlement. Anchored by the city of Edmundston, it also includes three towns, 12 villages, one rural community and 27 local service districts (LSDs).
- This region has a total population of 59,785 and combined assessed property values of approximately \$2.95 billion. Currently, 37 per cent of the population resides within the LSD areas and 63 per cent of the population resides within the 16 municipalities and the one rural community.
- In terms of the two official languages, 21 per cent reported English as their mother tongue, with 77 per cent reporting French as their mother tongue. Edmundston is subject to the requirements of the *Official Languages Act*, which imposes specific requirements for providing a certain level of services in both official languages.
- 98 per cent of the working population lives and works within this region. The economic base of this region includes a wide variety of businesses related to natural resource-based industries, telecommunications, agriculture, financial institutions and retail.
- Communities within this region are cost sharing on solid waste operations through the COGERNO Solid Waste Commission. As for economic development, the region is served by Enterprise Madawaska for Madawaska County and by Enterprise Grand Falls for those entities within Victoria County. Presently the LSDs in this region receive land use planning services from the La Vallée, Madawaska, Restigouche or Rural District Planning Commissions. All the municipalities and the rural community within this region, with the exception of the village of Kedgwick and town of Saint-Quentin, are members of the La Vallée, Madawaska or Restigouche District Planning Commission. The village of Kedgwick and town of Saint-Quentin provide land use planning services to their respective communities.
- Policing is provided by three forces in the region. Edmundston and The Town of Grand Falls-La Ville de Grand-Sault have their own local police forces while the other towns, villages, rural community and LSDs receive policing services from the RCMP under various agreements. In terms of fire prevention and suppression services, there are currently 19 separate fire departments serving the region.
- Within Regional Service District 1, there would be one reconfigured and five new municipalities, with populations varying from 4,678 to 20,745. The attached statistical profile and map identifies the new or reconfigured municipal entities that would be included in this proposed Regional Service District.

Profile of Proposed Municipal Entity E1 – R1

- This new municipal entity, located in the northwest corner of the province, would bring together five villages and six local service districts (LSD). Combined, this new entity would have a population of 4,678 and assessed property values totalling approximately \$223 million. The attached statistical profile identifies the current administrative units that would be included in this proposed new entity.
- Commonly referred to as "Haut Madawaska," this proposed new municipal entity has a primarily francophone population though there is a small number of English-speaking residents dispersed throughout the area. This entity would generally be considered rural in nature.
- A relatively high percentage of the working population (65 per cent) finds employment within this newly defined entity. This employment is linked primarily to large-scale poultry operations located in the LSDs of the Haut Madawaska area, while the related processing plant is located in the Village of Saint-François de Madawaska. Many residents of this area would also be employed by Edmundston-based businesses and public sector organizations.
- Much of the development in this area is located along Highway 205, which coincides with the Saint John River. There is also substantial development along Lac Baker, consisting primarily of cottages. Density of development outside of these two areas tends to be limited and is dispersed over a relatively large geographical area.
- Currently, there are contracts in place for fire protection services between the LSDs and neighbouring villages. In addition, Edmundston provides the Village de St. Hilaire with fire protection services. Along with providing fire protection services to its neighbouring LSD, Saint-François de Madawaska provides recreational and leisure services such as an arena and library facilities.
- Recently, most of the LSD of Lac Baker was annexed to the village of Lac Baker. In addition, there have been some preliminary discussions regarding the possible restructuring of Saint-François de Madawaska and the LSD of Saint-François. The recent flooding situation that occurred in this area highlighted the need for more cooperation in the area of emergency measures planning.
- Each of the existing five municipalities to be included in this proposed new entity has a financial institution and all but one have a post office. Other federal and provincial government services for this area are located in Edmundston.
- This proposed municipal entity is a natural rural setting located within a peninsula that separates the Province of Quebec and the State of Maine. It offers a quiet lifestyle as well as providing an economic base for the residents of the area.

Profile of Proposed Municipal Entity E2 – R1

- This proposed reconfigured municipal entity would bring together one city and three local service districts (LSD). Combined, this new entity would have a population of 20,745 and assessed property values totalling approximately \$1.13 billion. The attached statistical profile identifies the current administrative units that would be included in this proposed reconfigured entity.
- This reconfigured municipal entity, which has both urban and rural elements, has a primarily francophone population with a small number of English-speaking residents residing mostly within the city of Edmundston.
- A high percentage (94 per cent) of the working population in this area finds employment within the proposed entity. This employment is linked to major employers such as the Fraser pulp and paper mill, the Edmundston Regional Hospital as well as many other businesses and the public sector.
- Edmundston has a mix of residential and non-residential development. Development in the LSDs of this proposed entity is predominantly residential.
- In 1998, the city of Edmundston was restructured, which involved the annexation of three villages (Saint-Basile, Verret and Saint-Jacques) as well as a portion of the Madawaska local service district. The proposed reconfigured municipal entity builds on this previous restructuring.
- Edmundston provides fire protection services to the LSDs of Saint-Jacques and Saint-Basile. The LSD of Saint-Joseph, however, has its own fire department and provides recreational services to its residents.
- All financial institutions as well as federal and provincial services for this area are located in Edmundston. The LSD of Saint-Joseph has a postal counter.
- This proposed reconfigured entity will combine both an urban core that offers a variety of employment opportunities and services and a more quiet rural setting in surrounding areas.

Profile of Proposed Municipal Entity E3 – R1

- This proposed new municipal entity would bring together one town, two villages and four local service districts (LSD). Combined, this new entity would have a population of 6,418 and assessed property values totalling approximately \$238 million. The attached statistical profile identifies the current administrative units that would be included in this proposed new entity.
- This proposed new entity, which is mostly rural, has a predominantly francophone population with a small number of English-speaking residents dispersed throughout the area.
- 39 per cent of the working population finds employment within the proposed new municipal entity. This employment is linked in large part to the Irving sawmill situated in the LSD of Saint-Léonard. The remainder of the working population generally finds employment in the nearby city of Edmundston.
- Much of the development is within the municipalities although there is industrial development in the LSD of Saint-Léonard with the Irving sawmill being located there.
- In this proposed new entity, some of the LSDs have a formal fire protection service agreement with their neighbouring municipality of the same name; the LSDs of Notre-Dame-de-Lourdes and Saint-Léonard purchase fire protection services from the Town of St. Leonard.
- In the 1997 restructuring study for the Madawaska region, it was then determined that the Village of Rivière-Verte should not be included with the restructured city of Edmundston. More recently, a request was made to have a portion of the Saint-Léonard LSD become part of the rural community of Saint-André.
- Although there is no cost-sharing arrangement for recreational facilities, an affiliation to St. Leonard is recognized as a majority of the area residents use the sports facilities situated in this town. Others use facilities located in the city of Edmundston.
- Financial institutions and postal services are located in all three municipalities. Federal and provincial services for the area are located mostly within St. Leonard, which is considered the small service centre for this area primarily due to its geographical location. Other services are available in Edmundston or The Town of Grand Falls - La Ville de Grand-Sault.

				Total	5,022	

Profile of Proposed Municipal Entity E4 – R1

- This proposed new municipal entity would bring together one town, one village, one rural community and one local service district (LSD). Combined, this new entity would have a population of 10,818 and assessed property values totalling approximately \$682 million. The attached statistical profile identifies the current administrative units that would be included in this proposed new entity.
- This proposed entity, which has mostly rural characteristics, has a predominantly francophone population as well as a significant number of Anglophone residents mainly concentrated in The Town of Grand Falls-La Ville de Grand-Sault and the Village of Drummond.
- A high percentage of the working population (88 per cent) finds employment within this new entity. More specifically, the McCain processing plant located in the rural community of Saint-André, as well as the diverse businesses located within Grand Falls-Grand-Sault, provides a substantial portion of the employment in this area. A large number of the working population is involved in the potato growing business and derivatives of that industry.
- Much of the development in this grouping is located within Grand Falls-Grand Sault, though there is significant but dispersed residential development in other parts of this proposed new entity. There is a substantial potato farming industry in the LSD of Drummond and in the rural community of Saint-André.
- There appears to be three major affiliations gravitating around Grand Falls-Grand-Sault, Saint-André and Drummond. This has been stressed lately with the forming of the first rural community, which grouped together the LSD of Saint-André and the Village of Saint-André. A request to have a portion of the Drummond LSD annexed to Saint-André has also been made. Affiliations which exist within the proposed new entity are due to the area residents using the major sports and recreation facilities, as well as having access to retail businesses and other services, located in Grand Falls-Grand-Sault.
- Financial institutions and postal services are located in each of the municipalities within this new entity as well as in the rural community. Other federal and provincial services for the area are located within Grand Falls-Grand-Sault, which also has a high school and hospital.
- This proposed municipal entity has a common economic interest in the potato-growing industry and related businesses which provides this particular area with significant opportunities for economic growth.

Profile of Proposed Municipal Entity E5 – R1

- This proposed new municipal entity would bring together three villages and seven local service districts (LSD). Combined, this new entity would have a population of 10,687 people and assessed property values totalling approximately \$425 million. The attached statistical profile identifies the current administrative units that would be included in this proposed new entity.
- This newly defined area in Victoria County is mostly rural with a predominantly English-speaking population. There is also a Danish community in the LSD of Denmark that is very active in the farming sector of their community.
- A relatively high percentage (73 per cent) of the working population finds employment within this proposed entity. This employment is linked primarily to forestry-related businesses, while the remaining workforce generally finds employment in diverse industries in The Town of Grand Falls - La Ville de Grand-Sault. Another important sector of employment in this region is linked to potato growing and derivatives of that industry.
- The municipalities within this proposed entity have some significant residential development within their boundaries while the density of development throughout the LSDs is limited considering their large geographical area and the space requirement for farming activities.
- Each municipality in this newly formed entity provides fire protection services to its neighbouring LSD. An affiliation exists between the communities, which is likely due, in part, to the area residents using recreation facilities located in the Village of Perth-Andover and the Village of Plaster Rock.
- Each municipality in the proposed new entity has a financial institution and a post office. Other federal and provincial services for the area are also located in Plaster Rock and Perth-Andover. Other major services are often obtained in the Town of Grand Falls-La Ville de Grand-Sault.
- This proposed municipal entity along the Tobique and Aroostook rivers offers the ideal setting for outdoor enthusiasts and tourism-related activities. Plaster Rock is the gateway to Mount Carleton Provincial Park while the Village of Perth-Andover is the gateway to the Tobique River.

Profile of Proposed Municipal Entity E6 – R1

- This new municipal entity would bring together one town, one village and six local service districts (LSD). Combined, this new entity would have a population of 6,439 and assessed property values totalling approximately \$250 million. The attached statistical profile identifies the current administrative units that would be included in this proposed new entity.
- This proposed new entity is often referred to as the 'Restigouche Ouest' region, and consists of a rural population of predominantly francophone residents.
- A very high percentage of the working population (99 per cent) finds employment within this newly defined entity. This employment is linked primarily to the natural resources sector, mainly the forest, agriculture and maple industries, or within the business sectors of the two municipalities.
- There is residential and non-residential development concentrated in the Village of Kedgwick, the town of Saint-Quentin, and the adjacent LSDs of Grimmer and Saint-Quentin.
- In this new entity, there is a cost-sharing agreement for fire protection and recreational services between the Village of Kedgwick and the LSDs of Grimmer and White's Brook. The St. Jean Baptiste de Restigouche LSD provides fire protection services to its neighbouring LSDs and is supported for back-up by the Village of Kedgwick. Saint-Quentin has had preliminary discussions regarding restructuring options that would annex the LSDs of Saint-Quentin and St. Martin de Restigouche. The LSDs of Menneval, St. Jean Baptiste de Restigouche and White's Brook have continued interest in restructuring. Kedgwick continues to study cost-sharing options for the provision of recreational and community services.
- Financial institutions, post offices as well as some federal and provincial services for this area are located within the two municipalities included in this proposed entity. Medical and other basic services are also found within these two municipalities. Additional services are typically accessed in the cities of Edmundston or Campbellton.
- This proposed new entity has a strong affiliation amongst its residents due to the dependence on the natural resources of their area, their common cultural and linguistic characteristics, and the fact that they are located between two major centres in the northern part of the Province.

Regional Service District 2

- Located in the northern part of the province, this region, which includes the majority of the area currently served by the Restigouche Solid Waste Commission, is characterized by urban, suburban and rural settlement. Anchored by the City of Campbellton, it also includes one town, six villages and 17 local service districts (LSDs).
- This region has a total population of 27,038 and combined assessed property values of approximately \$1.39 billion. Currently 28 per cent of the population resides within the unincorporated areas and 72 per cent of the population resides within municipalities.
- In terms of the two official languages, 41 per cent reported English as their mother tongue, with 56 per cent reporting French as their mother tongue. The City of Campbellton, the Town of Dalhousie, the Village of Charlo, the Village of Eel River Crossing and the Village of Tide Head are subject to the requirements of the *Official Languages Act*, which imposes specific requirements for providing a certain level of services in both official languages.
- 97 per cent of the working population lives and works within this region. The economic base of this region includes businesses related to natural resource-based industries (forest products, mining, fishery), tourism, manufacturing, financial institutions and retail.
- Communities within this region are cost sharing on solid waste operations through the Restigouche Solid Waste Commission. As for economic development, the region is currently served by Enterprise Restigouche. Presently, LSDs and all municipalities in this region, with the exception of Belledune, receive land use planning services from the Restigouche District Planning Commission. Belledune receives planning services from the Belledune Planning Commission.
- Policing is provided by the RCMP in the region through various agreements. In terms of fire prevention and suppression services, there are currently 13 separate fire departments (eight municipal and five LSD) serving the region.
- Within Regional Service District 2, there would be three newly constituted municipalities, with populations varying from 3,248 to 13,931. The attached statistical profile and map identifies the new municipal entities that would be included in this proposed Regional Service District.

Profile of Proposed Municipal Entity E7 – R2

- This proposed new municipal entity would bring together one city, two villages and eight local service districts (LSD). Combined, this new entity would have a population of 13,931 and assessed property values totalling approximately \$628 million. The attached statistical profile identifies the current administrative units that would be included in this proposed new entity.
- Surrounded by the natural beauty of the Appalachian Mountains and known as the gateway to the Atlantic Provinces, this proposed new municipal entity has a rich mix of Acadian, Scottish, English, Irish and Mi'kmaq descendants. Its population is largely bilingual with pockets of communities having either a predominant Anglophone or Francophone population.
- A high percentage of the working population (92 per cent) finds employment within this newly defined area. Health and social service activities, manufacturing and retail operations provide this area with the majority of its employment.
- The City of Campbellton has increasing concerns with its ability to continue growth within its boundaries. The Village of Atholville has expanded its business sector to its potential considering the demographics of the region; and the Village of Tide Head continues to promote residential growth. Density of development outside of these three areas is limited and dispersed along the major roadways in the surrounding LSDs.
- The City of Campbellton provides fire dispatch services to the other municipalities and surrounding LSDs. The City of Campbellton also provides fire protection to one of the LSDs in this grouping. In this proposed entity, there are three municipal fire departments and four volunteer fire departments in the LSDs that offer mutual aid among themselves when the need arises. The Villages of Tide Head and Atholville also contribute to the operating costs of the Memorial Civic Centre located in Campbellton.
- It is important to note here that the Campbellton Region restructuring study of 1997 strongly recommended the full amalgamation of the three municipalities and consideration to include the LSD of McLeods. Although the other LSDs were not included in this particular study, there is a strong sense of economic interdependence as well as social cooperation in the proposed entity as evidenced by the make-up of community organizations.
- In this new municipal entity, two of the three municipalities have financial institutions and postal services, as well as significant shopping areas. All of the federal and provincial services as well as health facilities for the area are located in the City of Campbellton.

Profile of Proposed Municipal Entity E8 – R2

- This proposed new municipal entity would bring together one town, three villages and seven local service districts (LSD). Combined, this entity would have a population of 9,859 and assessed property values totalling approximately \$468 million. It is important to note that this number does not reflect the current changes to the non-residential assessment base with the closure of the paper mill in Dalhousie. The attached statistical profile identifies the current administrative units that would be included in this proposed new entity.
- This proposed new municipal entity, which is mostly rural in nature, has a predominantly francophone population although there are also some communities that are predominately English-speaking. A large percentage of residents in this entity are bilingual.
- A relatively high percentage (60 per cent) of the working population used to find employment within this newly defined entity. A large percentage was mostly employed by the now closed Abitibi-Bowater pulp and paper mill in the Town of Dalhousie. Residents of the Villages of Balmoral and Eel River Crossing are mostly employed by the forestry sector, while the Village of Charlo depends, in part, on its tourism sector for employment. Healthcare, manufacturing and retail sectors also provide substantial employment for residents of the area.
- The Town of Dalhousie, with the closure of two of its major industries, is in transition phase, and with the surrounding villages, are actively pursuing economic and growth development projects for this region.
- All municipalities have contracts in place to provide fire protection services to their neighbouring LSDs. The Villages of Eel River Crossing and Balmoral also have a formal agreement with their neighbouring LSDs for residential waste collection services.
- A restructuring study for the Dalhousie Region in 1997 had recommended regionalization of selected services for this new entity. Also, the Village of Eel River Crossing had recently initiated preliminary discussions to annex surrounding LSDs. Efforts to foster more cooperation between the existing municipalities and surrounding LSDs to be more cost-effective and efficient in service delivery, mainly in the areas of economic development and tourism, are ongoing.
- All four municipalities have some type of financial institution and postal services. Some provincial and health services are available in the Town of Dalhousie while other federal and provincial services are available within the nearby City of Campbellton.

Profile of Proposed Municipal Entity E9 – R2

- This proposed new municipal entity would bring together one village and two local service districts (LSD). Combined, this new entity would have a population of 3,248 and assessed property values totalling approximately \$29.3 million. The attached statistical profile identifies the current administrative units that would be included in this proposed new entity.
- This proposed new entity is located along the north-eastern coastline of the Bay of Chaleur. This primarily English-speaking rural region has a mix of residents of Irish, Scottish and French origin. Many of its residents are also bilingual.
- A relatively high percentage (60 per cent) of the working population finds employment within this new entity. Traditionally, farming, fishing and lumber businesses have been the main employment providers. Over the past 15 to 20 years, some resource industries have established themselves in the Village of Belledune in order to support a number of mines in the Chaleur region. The Port of Belledune is also taking a lead role in the growing industry in the area.
- There is development in the Village of Belledune as well as in the LSD of Chaleur where Blue Note Mines has recently re-opened. There is also great interest in promoting wind energy sites in this area and attracting qualified workers and support-type businesses.
- The Village of Belledune has a contract in place to provide fire protection to a portion of the Chaleur LSD and to provide back-up to the Lorne Fire Department. In this new entity, both LSDs and the Village of Belledune have recreational facilities that are used by all three communities although there is no formal cost-sharing arrangement.
- In 1994, the Village of Belledune of that period was amalgamated with the then Village of Jacquet River and five nearby communities. The Chaleur LSD also realized significant gains in the provision of services when it combined several communities in 1996 to form the current LSD.
- The Village of Belledune does have a financial institution and offers postal services. Residents in this proposed newly formed entity commute to either the cities of Campbellton or Bathurst for shopping, educational, provincial, federal and health services.

Regional Service District 3

Regional Service District 3 - Profile

- Located in the northern part of the province, this region, which includes the majority of the area served by the Nepisiquit-Chaleur Solid Waste Commission, is characterized by urban, suburban and rural settlement. Anchored by the City of Bathurst, it also includes one town, three villages and 13 local service districts (LSDs).
- This region has a total population of 34,277 and combined assessed property values of approximately \$1.46 billion. Currently 39 per cent of the population resides within the LSD areas and 61 per cent of the population resides within municipalities.
- In terms of the two official languages, 28 per cent reported English as their mother tongue, with 70 per cent reporting French as their mother tongue. Bathurst is subject to the requirements of the *Official Languages Act*, which imposes specific requirements for providing a certain level of services in both official languages.
- 94 per cent of the population lives and works within this region. The economic base of this region includes a wide variety of businesses related to natural resource-based industries (forest products, mining and fishery), telecommunications, agriculture, financial institutions and retail.
- Communities within this region are cost sharing on solid waste operations through the Nepisiquit-Chaleur Solid Waste Commission. As for economic development, the region is currently served by Enterprise Chaleur. Presently, LSDs in this region receive land use planning services from the Belledune District Planning Commission. Bathurst provides its own land use planning services.
- Policing is provided by three forces in the region. Bathurst has its own local police force, while Beresford, Nigadoo, Pointe-Verte and Petit-Rocher share a regional force. The LSDs receive policing services from the RCMP. In terms of fire prevention and suppression services, there are currently seven separate fire departments (four municipal and three LSD) serving the region.
- Within Regional Service District 3, there would be one new and one reconfigured municipality, with populations of 14,412 and 19,865. The attached statistical profile and map identifies the new or reconfigured municipal entities that would be included in this proposed Regional Service District.

Profile of Proposed Municipal Entity E10 – R3

- This proposed new municipal entity would bring together one town, three villages and eight local service districts (LSD). Combined, this new entity would have a population of 14,412 and assessed property values totalling approximately \$465 million. The attached statistical profile identifies the current administrative units that would be included in this proposed new entity.
- Commonly referred to as "Upshore" within the Chaleur region, and located between the two economic poles of the village of Belledune and the City of Bathurst along the Bay of Chaleur, this new municipal entity has a primarily francophone population with a high percentage of its residents being bilingual.
- Approximately 34 per cent of the total workforce in this area finds employment in this newly defined entity. The region's economy is based on various sectors including services to industry, forest products, the mining sector and telecommunications. A high percentage of the working population finds employment within the whole Chaleur region, mainly in the resource-based (mining / metal products) and retail commerce sectors, social and health services and manufacturing.
- The municipalities, within this newly defined area, have been successful in achieving cooperation regarding service delivery and cost-sharing. A good example is their regional police force, the Beresford, Nigadoo, Petit-Rocher, Pointe-Verte police force (the BNPP, as it is commonly referred to), which is cost-shared amongst the four municipalities within this entity. These communities have also cooperated in other services such as tourism and economic development. The Village of Nigadoo has an agreement with the Town of Beresford to provide maintenance on their wastewater treatment system. The Village of Petit-Rocher has an agreement with the Province to provide fire protection services to the surrounding LSDs. The Robertville LSD has a regional fire department which provides fire protection services to the neighbouring LSDs.
- In this entity, the Village of Petit-Rocher is currently in the process of looking at restructuring options as well as cost-sharing for recreational services. In 1995, the LSDs surrounding the Robertville LSD had initiated a restructuring study that would have encompassed the surrounding LSDs.
- All four municipalities have some type of financial institution and post offices, with the exception of the Village of Nigadoo. The Village of Petit-Rocher and the town of Beresford offer some federal and provincial services as well as shopping areas. Most other services are obtained within the nearby City of Bathurst.
- In summary, this entity distinguishes itself by its closeness in lifestyle and linguistic affiliation and there exists a high level of political, social and community involvement.

Profile of Proposed Municipal Entity E11 – R3

- This proposed reconfigured municipal entity would bring together one city and five local service districts (LSD). Combined, this entity would have a population of 19,865 and assessed property values totalling approximately \$1 billion. The attached statistical profile identifies the current administrative units that would be included in this proposed reconfigured entity.
- This reconfigured municipal entity within the Chaleur region is located between the town of Beresford and the Acadian Peninsula. It combines a rural sector surrounding the urban core of the City of Bathurst. It has an equally represented francophone and English-speaking population dispersed throughout the entity although some communities will be either predominantly francophone or predominantly Anglophone.
- A relatively high percentage (91 per cent) of the working population finds employment in this proposed entity. The Chaleur region's economy is based on various sectors including services to industry, forest products, the mining sector and telecommunications, but it is the public services sector that employs the greatest number in the Chaleur region. However, with the re-opening of Caribou and Blue Note mines in the neighbouring Restigouche region, the Chaleur region can provide the already experienced and skilled workforce. The New Bandon-Salmon Beach LSD still has a large interest in fishing and farming activities.
- Much of the development in this entity is in the retail sector within the City of Bathurst while residential development continues in all communities but at a slower pace. This is due to the uncertain economic climate in the region since the recent closure of the Smurfit-Stone pulp plant within the City of Bathurst and the impending closure of Xstrata Mines for 2010.
- Currently, there is an agreement in place between the City of Bathurst and the Province on behalf of the surrounding LSDs, except for the Allardville LSD, to share the capital costs of the regional civic centre. Furthermore, the St. Anne Regional Fire Department provides fire protection to all of the Bathurst Parish LSDs. All fire departments within this entity provide mutual aid. The City of Bathurst also has an agreement with the Bathurst Parish and New Bandon-Salmon Beach LSDs to provide fire dispatch services.
- In this proposed reconfigured municipal entity, the Allardville LSD has made attempts to look at restructuring options.
- The Allardville LSD and the City of Bathurst have financial institutions and offer postal services. All federal, provincial and health care services, as well as shopping facilities are located in the City of Bathurst.

Regional Service District 4

Regional Service District 4 – Profile

- Located in the northeastern part of the province, this region, known as the Acadian Peninsula, is characterized by the fact that it continues to be essentially rural. More than 50 per cent of the population lives in unincorporated areas (LSDs).
- This region has a total population of 46,819 and combined assessed property values of approximately \$1.58 billion.
- In terms of the two official languages, 95% reported French as their mother tongue and 4% reported English as their mother tongue.
- Economically, the Acadian Peninsula remains focused on resource exploitation and processing. Fishing and its related activities along with peat extraction provide a large number of the jobs, while manufacturing and services provide employment in the main regional sub-centres.
- The majority of the communities receive waste management services from the *Commission de gestion des déchets solides de la Péninsule acadienne* (COGEDÉS) and land use planning services from the *Commission d'aménagement de la Péninsule acadienne* (CAPA). As for economic development, most of the region is served by Enterprise Péninsule. The communities located in Northumberland County receive land use planning and solid waste management services from commissions in the Miramichi region.
- Policing is provided by the Royal Canadian Mounted Police (RCMP) for the entire area. The RCMP operates as a regional force with four offices to serve the region. In terms of fire prevention and suppression services, there are 14 fire departments (11 municipal and three LSD) serving the region.
- Within Regional Service District 4, there would be five new municipal entities with populations varying from 5,455 to 12,986. The attached statistical profile and map identify the new municipal entities that would be included in this proposed Regional Service District.

Profile of Proposed Municipal Entity E12 – R4

- This proposed new municipal entity would bring together two villages, nine local service districts (LSDs), and a portion of one LSD with a total population of 9,343 and assessed property values of approximately \$243 million. The attached statistical profile identifies the administrative units that would be included in this proposed new municipal entity.
- This new entity is characterized by its rurality, its mainly residential character, and its fairly large area. The population is largely francophone. Its very small anglophone population is dispersed throughout the area.
- Among the working population, 34 per cent finds employment within the proposed entity. Many residents are employed in businesses and government agencies in the towns of Caraquet and Tracadie-Sheila, which are located outside this proposed municipal entity.
- Currently, apart from the village of Paquetville, which has experienced a boom in the business sector, development is mainly residential in nature and occurs throughout the area.
- The municipalities of Paquetville and Saint-Isidore, and the LSDs of Saint-Sauveur and Notre-Dame-des-Érables provide fire protection services to their residents and in certain cases for their neighboring communities. Other LSDs receive this service from the towns of Tracadie-Sheila and Caraquet. With regard to recreational and leisure services, the residents of the LSD and the municipality of Saint-Isidore use the facilities in the village of Saint-Isidore and the town of Tracadie-Sheila; the LSD of Saint-Sauveur uses the facilities in the city of Bathurst, and the others use mainly the facilities in the town of Caraquet.
- The two municipalities and three of the LSDs have financial institutions. The municipalities and the LSDs of Saint-Sauveur and Pont Landry each have an elementary school. With the exception of Department of Transportation facilities (two) and post offices (three), all of the government services are located outside the area, primarily in the municipalities of Bathurst, Caraquet, and Tracadie-Sheila.
- This entity is characterized by its rural nature and it relies on nearby municipalities for some essential services.

Profile of Proposed Municipal Entity E13 – R4

- This proposed new municipal entity would bring together one town, five villages, nine local service districts (LSDs) and a portion of one LSD with a total population of 12,087 and assessed property values of approximately \$442 million. The attached statistical profile identifies the current administrative units that would be included in this proposed new municipal entity.
- This new municipal entity, which consists of the sub-region currently known by many as "Greater Caraquet," has a rural and semi-urban character, and its population is primarily francophone. The few English-speaking residents are located mainly in the parish of New Bandon and surrounding communities.
- Among the working population, 86 per cent finds employment within the municipality itself. A large number of persons work in the businesses, fishing industries, and government agencies located in the town of Caraquet. Tourism-related businesses are also major employers for all of the communities in this entity.
- Much of the development is in the town of Caraquet, which has the Acadian Peninsula's only category A industrial park. Another aspect of the region's economic development is the contribution of arts and culture. Caraquet has been designated the "cultural capital of Canada."
- With respect to the sharing of services, the municipalities of Grande-Anse, Maisonnette, Bertrand, and Saint-Léolin provide fire protection services to their residents and in certain cases for their neighboring communities. The municipalities of Caraquet & Bas-Caraquet have merged their fire protection services and serve several LSDs. In addition, they share public works services. The municipalities and LSDs in this entity are engaged in preliminary discussions concerning the possibility of restructuring.
- It should be noted that eight of the existing administrative units have financial institutions; however, several of these institutions have grouped together in recent years. There are six administrative units that have at least one school. However, most of the federal/provincial and other services are available in the town of Caraquet.
- This entity takes in the communities that surround the town of Caraquet and is widely known for its tourism sector. The main tourist attraction for this entire region is the Village Historique Acadien, located in this proposed municipal entity.

- This proposed new municipal entity would bring together one town, one village and 11 local service districts (LSDs) with a total population of 6,948 and assessed property values of approximately \$197 million. The attached statistical profile identifies the current administrative units that would be included in this proposed new entity.
- This new entity is rural in nature and consists of the sub-region known as "Lamèque & Miscou islands." Its population is primarily francophone, but a number of English-speaking residents live on Miscou Island.
- Among the working population, 63 per cent finds employment within the proposed entity itself. A large number of employees in this region depend on the fishing, peat moss, and berry industries, and more recently, on the wind energy industry.
- Currently, except for some residential construction in the LSDs, development in the sub-region is based on the town of Lamèque's diversification efforts.
- As for the sharing of services, the town of Lamèque, the village of Sainte-Marie-Saint-Raphael, and the LSD of Miscou provide fire protection services to their residents and in certain cases to their neighboring communities. Recreational facilities are available mainly in the town of Lamèque.
- It should be noted that only the communities currently incorporated as municipalities have financial institutions. In terms of government services, some are located in Lamèque and others outside the region, in the towns of Shippagan and Tracadie-Sheila.
- This entity is distinguished by its natural boundaries as it consists of two islands linked to the Acadian Peninsula by two separate bridges.

Profile of Proposed Municipal Entity E15 – R4

- This proposed new municipal entity would bring together one town, one village and five local service districts (LSDs) with a total population of 5,435 and assessed property values of approximately \$228 million. The attached statistical profile identifies the current administrative units that would be included in this proposed new entity.
- This new entity is currently known as “Greater Shippagan” and is mostly rural in nature. Its population is primarily francophone.
- Among the working population, 79 per cent finds employment within the proposed entity. A significant portion of the working population finds employment in the fisheries and in the businesses, industries, and government agencies located in Shippagan.
- Much of the development is within the town of Shippagan, which has an industrial park and a university campus. The LSD of Pointe-à-Brûlée is the only community that has experienced residential development.
- With regard to the sharing of services, the town of Shippagan has a formal agreement to provide fire protection services for the entire region. The LSDs obtain leisure services (arena, baseball, tennis, and soccer facilities) from the town of Shippagan. It should also be mentioned that the planned construction of a regional swimming pool by a Shippagan non-profit organization is a new shared-service arrangement for the region and surrounding communities.
- In this proposed new entity, the town of Shippagan and LSD of Inkerman Centre have financial institutions. All of the schools, a university campus, and a community college are located in the town of Shippagan, and most of the government offices, both federal and provincial, are also found in Shippagan.
- This new entity is distinguished mainly by its dependence on the fisheries sector, which accounts in part for its tourism draw, and by its economic development related closely to the Shippagan university campus.

Profile of Proposed Municipal Entity E16 – R4

- This proposed new municipal entity would bring together one town and 15 local service districts (LSDs) with a total population of 12,986 and assessed property values of approximately \$472 million. The attached statistical profile identifies the current administrative units that would be included in this proposed new entity.
- Known as "Greater Tracadie-Sheila," this new entity has a quasi-urban but mostly rural character and is predominantly francophone.
- Among the working population, 73 per cent finds employment within the proposed entity. A large number of residents work in the businesses and government agencies located in the town of Tracadie-Sheila.
- Currently, except for some residential construction in the LSDs, the region's development is based on the development capacity of the town of Tracadie-Sheila. In the near future, residential development should occur outside the limits of Tracadie-Sheila given the lack of space within the municipality.
- As for the formal sharing of services, the LSD of Rivière du Portage-Tracadie Beach provides fire protection services for four LSDs, while the town of Tracadie-Sheila provides that same service for the others. The LSDs obtain their leisure services, such as the arena, the swimming pool, and baseball, tennis, and soccer facilities, from the municipality of Tracadie-Sheila. These services are shared on the basis of an additional fee charged to the LSD users rather than through property taxation. The need to implement a cost-sharing system for sports and recreational facilities for the whole community has been identified.
- All financial and postal services are available in the town of Tracadie-Sheila, which also has several provincial and federal services. The services not available in the town of Tracadie-Sheila are accessible either in the neighbouring village of Néguaac or in the municipalities of Miramichi and Bathurst.
- To sum up, this entity is characterized by its dependence on services located in the town of Tracadie-Sheila. In addition, the residents participate actively in the different community and sports activities organized within this proposed entity.

- Highway

Regional Service District 5 - Profile

- Located in the eastern part of the province, the majority of this region is served by the Northumberland Solid Waste Commission and includes the city of Miramichi, five villages, one rural community and 22 local service districts (LSDs).
- This region has a total population of 46,107 and combined assessed property values of approximately \$2.08 billion. Currently, approximately 45 per cent of the population resides within the unincorporated areas and approximately 55 per cent of the population resides within municipalities or the rural community.
- In terms of the two official languages, 73 per cent reported English as their mother tongue, with 25 per cent reporting French as their mother tongue. The city of Miramichi is subject to the requirements of the *Official Languages Act*, which imposes specific requirements for providing a certain level of services in both official languages.
- 92 per cent of the working population lives and works within this region. The economic base of this region includes businesses related to natural resource products (wood industry, peat moss, fishery) manufacturing, financial institutions and retail.
- Most communities within this region are cost sharing on solid waste operations through the Northumberland Solid Waste Commission, with the exception of the Village of Stanley which receives this service through the Fredericton Regional Solid Waste Commission. As for economic development, the majority of the region is currently served by Enterprise Miramichi, while Stanley is served by Enterprise Central NB, the village of Néguaq by Enterprise Péninsule, and the village of Rogersville by Enterprise Kent. Presently, most of the LSDs and municipalities in this region receive land use planning services from the Miramichi District Planning Commission. The LSD of Stanley receives this service through the Rural District Planning Commission, and the LSDs of Acadieville, Rogersville, Collette and the village of Rogersville receive the service through the Kent District Planning Commission.
- Policing is provided by Miramichi through its own force within its boundaries and by the RCMP in the remainder of the region. In terms of fire prevention and suppression services, there are currently nine separate fire departments (six municipal, one rural community and two LSD) serving the region.
- Within Regional Service District 5 there would be one reconfigured municipality and four new municipalities, with populations varying from 3,523 to 26,656. The attached statistical profile and map identifies the new or reconfigured municipal entities that would be included in this proposed Regional Service District.

Profile of Proposed Municipal Entity E17 – R5

- This proposed new municipal entity would combine one village and four local service districts with a total population of 5,502 and assessed property values of approximately \$186 million. The attached statistical profile identifies the current administrative units that would be included in this proposed new entity.
- Commonly referred to as the "Alnwick Area" and located to the northeast of the city of Miramichi, this entity has a predominantly francophone population although there is also a predominantly Anglophone population in the Tabusintac LSD.
- 54 per cent of the working population finds employment within this newly defined entity. This employment is linked primarily to the fishery and peat moss industries located within the region. The remaining working population generally travels to either Miramichi or other regions for employment.
- Much of the development in this area is located along Highway 11, which crosses the region and continues to their neighbouring community of the town of Tracadie-Sheila in the Acadian Peninsula. There is also residential inland development along local and provincial roads. The highest concentration of population would be found in the village of Neguac.
- Neguac currently has an agreement in place to provide fire protection services to the neighbouring LSDs, except Oak Point, in this entity. Neguac has an arena, and has expressed interest in seeking some financial support for its operation from the LSDs. Both the Fair Isle and Tabusintac LSDs have a community centre which remain active.
- Several years ago, Neguac had expressed interest in annexing the LSD of Fair Isle. The Tabusintac LSD is very active in pursuing tourism development for their community and has expressed interest in exploring restructuring options.
- Neguac provides financial, postal and other services to this area. Other federal and provincial services are obtained from Miramichi and Tracadie-Sheila.

Profile of Proposed Municipal Entity E18 – R5

- This proposed reconfigured municipal entity combines one city and nine local service districts with a total population of 26,656 and assessed property values of approximately \$1.38 billion. The attached statistical profile identifies the current administrative units that would be included in this proposed reconfigured entity.
- Commonly referred to as the "Greater Miramichi Region," this proposed reconfigured entity has both urban and rural components and its population is predominantly Anglophone with some French-speaking residents dispersed throughout this region.
- A high percentage (96 per cent) of the working population finds employment within this proposed entity. This employment is linked primarily to wood industry operations located within the region. Although there has been the recent closure of mills in Miramichi, there remains some wood industry related employment; however, the greatest percentage of employment is now in the service and retail sectors with the remainder being with the manufacturing sector.
- Much of the development in this area is located within the city of Miramichi and along Highway 8, which borders the Miramichi River and the Southwest Miramichi River. There is also inland residential development along local and provincial roads where the density of development tends to be limited and dispersed over a relatively large geographical area, with a few pockets of more concentrated development.
- Miramichi, as well as the Sunny Corner LSD, provide fire protection services to the surrounding LSDs in this entity. The LSD of Sunny Corner also has an arena that is used by its residents, but the majority of the residents in the LSDs use the recreation facilities located within Miramichi.
- In the municipal restructuring study of 1995, Miramichi underwent amalgamation of several municipal units to form its current extended boundaries. In this proposed entity, there still appears to be some recognition of the need to make structural changes as reported by various statements and comments heard over the past years through various news media.
- Miramichi is the hub for all types of financial institutions and postal services. It is also the service centre for federal and provincial services for the area.
- In summary, the communities in this entity have a strong affiliation with Miramichi as evidenced by their migration toward Miramichi for most, if not all, of their required services.

Profile of Proposed Municipal Entity E19 – R5

- This new municipal entity would bring together two villages, one newly formed rural community and two local service districts. Combined, this new entity would have a population of 5,266 and assessed property values of approximately \$202 million. The attached statistical profile identifies the current administrative units that would be included in this proposed new entity.
- Commonly referred to as the "Upper Miramichi Region," this proposed new entity, which is located immediately at the south-western end of the "Miramichi" region, is mostly rural and has a primarily Anglophone population.
- 58 per cent of the working population finds employment within this newly defined entity. This employment is linked primarily to wood industry operations located within the region with another percentage working in the service industries. A small percentage commutes towards the City of Fredericton for employment.
- Much of the development in this area is located along Highway 8, which often borders the Southwest Miramichi River. There is also inland development along local and provincial roads where the density of residential development tends to be quite limited and dispersed over a relatively large geographical area.
- Currently, the Village of Stanley and the Village of Doaktown, and the Upper Miramichi Rural Community have agreements to provide fire protection services to their neighbouring LSDs as well as mutual aid amongst themselves. The Village of Stanley has a cost-sharing agreement in place with the LSD of Stanley for its arena complex for recreational services.
- The Upper Miramichi Rural Community was recently established and elected its first council in the May 2008 municipal elections. Also, some past flooding situations experienced by some communities in this entity have prompted the residents to seek greater cooperation in the area on emergency planning for the Upper Miramichi region.
- Both the Village of Stanley and Doaktown have financial institutions and a post office. Residents travel to Fredericton for other federal and provincial services.
- This proposed new municipal entity is naturally combined because of its central geographic location, its linguistic profile and its common interest in outdoor activities. It has the well-known reputation of providing great hospitality to any outdoors sports and fishing enthusiast.

Profile of Proposed Municipal Entity E20 – R5

- This proposed new municipal entity would bring together one village and four local service districts (LSD). Combined, this new entity would have a population of 5,160 and assessed property values of approximately \$ 213 million. The attached statistical profile identifies the current administrative units that would be included in this proposed new entity.
- Commonly referred to as the "Southwest Miramichi" and located to the west of the city of Miramichi, this mostly rural entity has a predominantly English-speaking population though there is a small French population dispersed throughout the area.
- A relatively small percentage (34 per cent) of the working population finds employment within this newly defined entity. This employment is linked primarily to wood industry operations located within the region as well as service industries. The remaining working population commutes toward Miramichi.
- Much of the development in this area is located along Highway 8 which borders the Southwest Miramichi River and Renous River. There is also inland residential development along local and provincial roads. There is also dispersed rural development along Highway 108, which is a major link between Quebec and the Maritimes.
- Currently, the Village of Blackville provides fire protection services to the adjacent LSDs, while the Renous-Quarryville LSD fire department provides services to its neighbouring LSDs in cooperation with Miramichi and the Sunny Corner LSD fire services. Comments were recently made by a councillor from the Village of Blackville that efforts should be made to perhaps combine the two fire departments in this new entity, so as to better utilize equipment resources and maintain their volunteer membership levels.
- Financial and postal services are provided within the Village of Blackville. The LSD of Renous has a federal penitentiary. All federal and provincial services are generally obtained from Miramichi.
- In summary, this entity comes together mainly because of its natural inclination, as a rural entity, to be a "good neighbour" and to provide mutual aid to neighbouring communities. This entity also shares common interests in activities relating to fishing and other recreational activities along the rivers.

Profile of Proposed Municipal Entity E21 – R5

- This proposed new municipal entity would combine one village with three complete and three partial local service districts (LSD). Combined, this new entity would have a population of 3,523 and assessed property values totalling approximately \$101 million. The attached statistical profile identifies the current administrative units that would be included in this proposed new entity.
- Commonly referred to as "La Région de Rogersville" and located to the south of the city of Miramichi, this is a mostly rural entity with a primarily francophone population though there is a small English-speaking population dispersed throughout the area.
- 56 per cent of the working population finds employment within this newly defined entity. This employment is linked to wood industry and peat moss operations located within the region with many of the remainder working outside of this defined area either in the cities of Miramichi or Moncton.
- In this new entity, much of the development is located along Highway 126 which links the region from the cities of Miramichi to Moncton. There is also inland development along local and provincial roads. In this case, the density of development tends to be limited and dispersed over a relatively large geographical area, with a few pockets of more concentrated development.
- Currently, the village of Rogersville fire department has a formal agreement in place to provide fire protection services to the LSDs surrounding the municipality. As for recreational services, residents of all the surrounding communities are actively taking part in various fund raising activities to help with the operating costs of the Rogersville arena, which is operated by a non-profit organization. Rogersville also has a local RCMP detachment which provides coverage to this municipality.
- In this new municipal entity, there is no record of a request to open discussions on restructuring options other than having the municipal council indicate that there should be more cooperation between the surrounding communities.
- Rogersville provides all financial, postal and basic services to the surrounding communities within this proposed entity. Federal, provincial and health services are obtained from Miramichi and from the town of Richibucto. Since this entity is a good distance from Miramichi and its closest neighbouring village of Saint Louis-de-Kent, Rogersville has become the local centre for most of the local services (groceries, shopping and recreational services).
- In summary, this new municipal entity has a natural affiliation to Rogersville which, over the years, has become the service provider for the adjacent communities.

Regional Service District 6

Regional Service District 6 - Profile

- Located in the eastern part of the province, the majority of the region is served by the Kent County Solid Waste Commission. The region includes two towns, three villages and 20 local service districts (LSD).
- This region has a total population of 29,927 and combined assessed property values of approximately \$1.25 billion. Currently 76 per cent of the population resides within the unincorporated areas and 24 per cent of the population resides within municipalities.
- In terms of the two official languages, 24 per cent reported English as their mother tongue, with 74 per cent reporting French as their mother tongue. The Village of Rexton and the town of Richibucto are subject to the requirements of the *Official Languages Act*, which imposes specific requirements for providing a certain level of services in both official languages.
- 64 per cent of the working population lives and works within this region. The economic base of this region includes businesses related to natural resource products (forestry, fishery, peat moss) manufacturing, tourism and the retail sector.
- Most communities within this region are cost sharing on solid waste operations through the Kent Solid Waste Commission. As for economic development, the majority of the region is currently served by Enterprise Kent, while the LSD of Baie Ste. Anne is located in the area served by Enterprise Miramichi. Presently, the LSDs and municipalities in this region receive land use planning services from the Kent District Planning Commission, with the exception of the LSD of Baie Ste. Anne, which receives this service through the Miramichi District Planning Commission.
- Policing is provided by the RCMP in the region through various agreements. In terms of fire prevention and suppression services, there are currently 11 separate fire departments (five municipal and six LSD) serving the region.
- Within Regional Service District 6, there would be four newly constituted municipalities, with populations varying from 6,466 to 9,233. The attached statistical profile and map identifies the new municipal entities that would be included in this proposed Regional Service District.

Profile of Proposed Municipal Entity E22 – R6

- This proposed new municipal entity located in eastern New Brunswick would bring together one village and eight local service districts (LSD) with a total population of 6,466 and assessed property values totalling approximately \$198 million. The attached statistical profile identifies the current administrative units that would be included in this proposed new entity.
- This proposed municipal entity is mostly rural and has a primarily francophone population.
- 52 per cent of the working population finds employment within this newly defined entity. This employment is linked primarily to natural resources such as the fishery, forestry and peat moss industries located within the region. There is also employment related to the tourism industry with the Kouchibouguac National Park and the Acadian Coastal Route. Situated next to the city of Miramichi, many of the Miramichi Bay region residents commute there for employment.
- Much of the development in this entity is located along Highway 117 which crosses this region and continues towards the Saint-Louis de Kent and Richibucto neighbouring communities to the south. There is also inland development along local and provincial roads which tends to be limited and dispersed over a relatively large geographical area, with a few pockets of more concentrated development.
- There are currently fire protection services cost-sharing arrangements in place whereby the village of Saint-Louis de Kent provides the service to the LSDs of Carleton, Saint-Ignace and Saint-Louis; the LSD of Baie Ste. Anne provides the service to the LSDs of Escuminac and Pointe-Sapin; and the nearby town of Richibucto provides the service to the LSD of Saint Charles. However, all of these fire departments have a mutual aid agreement amongst them.
- In this proposed entity, there has been no formal request to look at restructuring options but there has been a request to look at the installation of a fire sub-station for the Baie Ste. Anne fire department in the LSD of Pointe-Sapin.
- Financial services and some local services can be obtained for most of this entity from the community of Baie Ste Anne. All other services are obtained from Miramichi. A small number of residents also obtain their financial, postal, federal and provincial services from Richibucto.
- In summary, part of this entity, often referred to as Kent North, is better known for its natural coastal features, its fisheries and aquaculture sites, and the natural beauty found in the Kouchibouguac National Park.

Profile of Proposed Municipal Entity E23 – R6

- This new proposed municipal entity on the eastern coast of New Brunswick would bring together one town, one village and five local service districts (LSD). Combined, this entity would have a population of 6,757 and assessed property values totalling approximately \$299 million. The attached statistical profile identifies the current administrative units that would be included in this proposed new entity.
- This entity is best described as the central area of Kent County, which spans from the coastline of the Northumberland Strait, to the heavily forested limits of the county to the West. Development along the coastline is mostly rural. This entity would have a population that is almost equally francophone and Anglophone, with some settlements having a majority of English-speaking residents, and others having a majority of French-speaking residents.
- 82 per cent of the working population finds employment in this newly defined entity. This employment is based on natural resources such as the fisheries, forestry, peat moss plants and tourism. There is also a large portion of employment related to the manufacturing and service industries mainly located within the two municipalities. The eastern portion of the entity has benefited from the tourism industry with Kouchibouguac National Park, the heritage associated with the two First Nations reserves, the provincial designated scenic route (Acadian Drive) and other tourist attractions within the region. Other employment opportunities are within an hour's drive to Moncton to the South (Route 11) and Miramichi to the North (Route 126).
- Much of the development in this entity tends to occur along the Northumberland Strait coastline and the Richibucto River.
- Fire protection services are currently provided by the LSDs of Harcourt, Weldford and Cap de Richibucto, the village of Rexton, and the town of Richibucto.
- In this entity, Richibucto and Rexton provide financial, postal, federal/provincial services to most of the communities. Other services are available in either the cities of Miramichi to the north or Moncton to the south.
- In summary, this entity covers the central areas of Kent County. Natural features such as the dunes, beaches, and abundant rivers along the small rural, agricultural and coastal settlements provide the beauty and peaceful lifestyle often sought after by its seasonal and permanent residents.

Profile of Proposed Municipal Entity E24 – R6

- This proposed new municipal entity would bring together one town and three local service districts (LSD) with a combined population of 7,470 and assessed property values totalling approximately \$343 million. The attached statistical profile identifies the current administrative units that would be included in this proposed new entity.
- This new entity is commonly known as the Bouctouche region and has mostly rural components. The population in this entity is mostly French-speaking with a few English-speaking settlements.
- 58 per cent of the working population finds employment within this proposed entity. This employment is linked mostly to the tourism, commercial and small & large manufacturing establishments present in the municipality and LSDs such as the fish plant in Sainte-Anne-de-Kent, the Irving Eco-Centre in the town of Bouctouche and the A & P Concrete plant.
- Much of the development in this entity is residential and within the denser linear settlements along the coast and the Bouctouche River.
- Within this entity, there are cost-sharing arrangements in place for fire protection services. Bouctouche's fire department provides services to the majority of the entity. However, because the LSDs cover such a vast area, the fire departments from the LSDs of Beersville and Saint-Paul and the Village de Saint-Antoine, which are outside this entity, also provide fire protection services.
- In this proposed entity, Bouctouche provides the financial, postal and some of the federal, provincial and health-care services. Other services are available in the nearby city of Moncton.
- In summary, within this proposed entity, Bouctouche, with its immediate neighbouring LSDs, has been at the frontline of eco-tourism in New Brunswick. The major focal points of this new entity would be Le Pays de la Sagouine, the award-winning Irving Eco-Centre and the Village of Bouctouche's Green Plan. The LSD of Saint Mary offers scenic views of the river.

Profile of Proposed Municipal Entity E25 – R6

- This proposed new municipal entity would bring together one village, four local service districts (LSD) and portions of two LSDs. Combined, this entity would have a population of 9,233 and assessed property values of approximately \$409 million. The attached statistical profile identifies the current administrative units that would be included in this proposed new entity.
- This proposed new entity is mostly rural in nature and has a predominantly Francophone population with some English-speaking settlements.
- 27 per cent of the working population finds employment within this newly defined entity. This employment is mostly service-based with some manufacturing industries located in the LSDs of Cocagne and Grand Saint-Antoine.
- Development in this new entity is mostly linear with higher densities along coastal routes. The Village de Saint-Antoine has seen an increase in population as well as residential development over the past decade.
- In this entity, there are currently cost-sharing arrangements in place to provide fire services. The fire protection services for the majority of this entity are provided by the Saint-Paul LSD, the Village de Saint-Antoine and the city of Moncton. The entire Cocagne LSD is covered by the Cocagne fire department.
- The LSD of Cocagne was included in a recent restructuring study that examined the possibility of establishing a rural community. However, this restructuring did not occur.
- In this entity, the Cocagne LSD has well-equipped recreational and community facilities. Some arenas elsewhere within this entity are utilized on a regional level while others are utilized principally by the communities in which they are located. The LSDs of Saint-Paul, Cocagne and Dundas, and the Village de Saint-Antoine provide some commercial and institutional services. All other federal and provincial services are obtained from the nearby towns of Bouctouche and Shediac or the city of Moncton.
- In summary, this proposed municipal entity provides its residents a peaceful and picturesque rural and coastal setting where commercial and public sector services are easily accessible.

Regional Service District 7

Regional Service District 7 - Profile

- Located in the eastern part of the province, the majority of this region is served by the Westmorland-Albert Solid Waste Commission. The region includes two cities, three towns, nine villages, one rural community and 27 local service districts (LSD).
- This region has a total population of 161,279 and combined assessed property values of approximately \$10.5 billion. Currently, 18 per cent of the population resides within the LSDs, four per cent within the rural community and 78 per cent within the municipalities.
- In terms of the two official languages, 61 per cent reported English as their mother tongue, with 36 per cent reporting French as their mother tongue. The cities of Moncton and Dieppe, as well as the town of Shediac are subject to the requirements of the *Official Languages Act*, which imposes specific requirements for providing a certain level of services in both official languages.
- 93 per cent of the working population lives and works within this region. The economic base of this region includes businesses related to natural resource products (forestry, fishery, peat moss), as well as the manufacturing, service, tourism and retail sectors.
- Communities within this region are cost sharing on solid waste operations through the Kent County Solid Waste Commission, the Kings County Solid Waste Commission or the Westmorland-Albert Solid Waste Commission. As for economic development, the communities are served through Enterprise Greater Moncton (the cities of Moncton, Riverview and Dieppe and the LSD of Moncton), Enterprise Central (which serves communities in York, Sunbury and Queens Counties), Enterprise South East (which serves communities in parts of Kings County, and parts of both Albert and Westmorland Counties), or Enterprise Fundy (parts of Kings, Albert and Westmorland Counties). Land use planning services are received from various District Planning Commissions operating within eastern New Brunswick, namely the Beaubassin, Greater Moncton, Kent, Royal, Rural, and Tantramar District Planning Commissions.
- Policing is provided by the RCMP in the region through various agreements. In terms of fire prevention and suppression services, there are currently 18 separate fire departments (14 municipal and four LSD) serving the region.
- Within Regional Service District 7, there would be three reconfigured municipalities and six newly constituted municipalities, with populations varying from 4,853 to 68,679. The attached statistical profile and map identifies the new or reconfigured municipal entities that would be included in this proposed Regional Service District.

Profile of Proposed Municipal Entity E26 – R7

- This proposed new municipal entity would bring together two villages and two local service districts (LSD) and portions of six LSDs with a combined population of 11,531 and assessed property values of approximately \$550 million. The attached statistical profile identifies the current administrative units that would be included in this proposed new entity.
- This proposed new entity is mostly rural and has a majority of English-speaking residents.
- 41 per cent of the working population finds employment within this proposed entity. This employment is linked to agriculture or forestry, or to service-oriented businesses within the municipalities. The majority of the working population commutes outside the entity for employment.
- Much of the development in this new entity is residential in nature and located along the major highways or in the municipalities.
- The municipalities provide fire protection services to the surrounding LSDs. The LSD of Havelock fire department also provides fire protection services to portions of the LSDs of Cardwell, Brunswick and Salisbury. There are also preliminary discussions underway to study cost-sharing options for a new library in the village of Salisbury and arena renovation and maintenance with the Village of Petitcodiac.
- The villages of Salisbury and Petitcodiac provide financial and postal services to this proposed new entity as well as other basic services. Other federal and provincial services are obtained within The Town of Riverview and the city of Moncton.

Profile of Proposed Municipal Entity E27 – R7

- This proposed reconfigured municipal entity would bring together a portion of the Moncton Local Service District (LSD) with the City of Moncton. Combined, this entity would have a population of 68,679 and assessed property values of approximately \$4.86 billion. The attached statistical profile identifies the current administrative units that would be included in this proposed reconfigured entity.
- This reconfigured municipal entity is mostly urban with the outlying area having a mostly rural component. The population in this entity is predominantly English-speaking with approximately a third of its population being French-speaking.
- 81 per cent of the working population finds employment within this new entity. Moncton offers a diverse array of employment opportunities in a wide variety of commercial and public sector fields.
- The City of Moncton continues to experience commercial, residential and cultural development. Other development is mostly along Routes 126, 134, 115 and 390, and is comprised primarily of single family residences. Some industries and commercial businesses exist along these routes.
- Currently, the City of Moncton has a formal agreement with the Province to provide fire protection services to the LSD. The LSD also has a formal agreement to cost-share on the Greater Moncton Pest Control Commission.
- In this proposed entity, all services are provided from Moncton which is recognized as a shopping hub for the Maritime Provinces.

Profile of Proposed Municipal Entity E28 – R7

- In this proposed new municipal entity, there is one town and seven local service districts (LSDs). Combined, this new entity would have a population of 12,350 and assessed property values of approximately \$862 million. The attached statistical profile identifies the current administrative units that would be included in this proposed new entity.
- Commonly referred to as the Greater Shediac area, this new entity is mostly rural in nature, and has a predominantly French-speaking population with some settlements in the LSDs having predominantly English-speaking populations.
- 43 per cent of the working population finds employment in this new entity and this employment is linked to the commercial, industrial, service and tourism sectors. Manufacturing and processing industries are located mainly within the Scoudouc Industrial Park.
- There is substantial residential growth, with permanent and non-permanent residents, along the coastline. The number of beaches in this entity has made the region attractive for tourism, which significantly bolsters the local economy.
- There are currently cost-sharing arrangements for fire protection services between the town of Shediac and the Province. The Greater Shediac Sewage Commission provides services to a portion of the rural community of Beaubassin Est and the LSD of Scoudouc. Residents in this entity obtain their recreational services in the surrounding town of Shediac, Village de Cap-Pelé, and the city of Moncton.
- Recently, the Pointe-du-Chêne LSD has expressed interest in the option of becoming a rural community.
- Shediac provides most of the financial, postal, federal and provincial services within this proposed entity. Other services, such as health care, are available in Moncton.

Profile of Proposed Municipal Entity E29 – R7

- This proposed new municipal entity combines one rural community and one village. Combined, this new entity would have a population of 9,044 and assessed property values of approximately \$512 million. The attached statistical profile identifies the current administrative units that would be included in this proposed new entity.
- This proposed new entity is mostly coastal and rural in nature but the Village de Cap-Pele does have an industrial base. Its population is predominantly French-speaking.
- 41 per cent of the working population finds employment within this new entity. This employment is partially linked to the fishing industry including processing. There are also a few manufacturing facilities located within the municipality. The tourism industry also provides employment opportunities.
- There has been an increase in population over the last decade in the rural community of Beaubassin East and most of the residential development associated with this increase has been located along the coastline within this proposed new entity.
- Cap-Pele and the Town of Shediac provide fire protection services to a portion of the Beaubassin East rural community and the Haute-Aboujagane fire department services the other portion. Most of the residents within this entity use the recreational facilities within Cap-Pele.
- In this newly formed entity, Beaubassin East has been active in promoting cost-sharing initiatives for its communities as it was the first rural community to be established in the Province.
- Most services for the area are located within Cap-Pele, the Town of Shediac and the city of Moncton. The larger wards within Beaubassin East do have some services such as post offices, financial institutions and schools while other smaller wards have recreational facilities such as ball fields and community centres.
- In summary, this proposed entity is best known for its coastal features which have become very popular for seasonal residents, permanent residents and for tourists.

Profile of Proposed Municipal Entity E30 – R7

- This proposed new municipal entity would bring together one town, two villages and nine local service districts (LSD). Combined, this new entity would have a population of 10,562 and assessed property values of approximately \$691 million. The attached statistical profile identifies the current administrative units that would be included in this proposed new entity.
- This new entity, commonly known as the Tantramar region, is mostly rural in nature. Though surrounded by rural areas, the Town of Sackville offers more of a semi-urban community, offering a wide variety of services and more diversified development. This entity has a predominantly English-speaking population dispersed over the entire region.
- 74 per cent of the working population finds employment within this proposed entity. This employment is linked primarily to the fisheries along the Strait or with various services in Sackville including Mount Allison University. Manufacturing and commercial industries are mainly located in Sackville with the exception of a window manufacturing plant in the Village of Port Elgin.
- Much of the development in this entity is within Sackville. There is some development along Highway 16 and along the coastal areas, consisting mostly of cottages. The LSDs of Cape Tormentine and Bayfield have seen a decline in commercial activity since the removal of the Ferry terminal and the opening of the Confederation Bridge in 1997. However, the promotion of this bridge has had the effect of boosting tourism in the area and has established it as the link to Prince Edward Island.
- There are currently five fire departments providing fire protection services in this proposed entity. These include the Sackville, Dorchester and the LSD of Pointe de Bute fire departments for the areas along the Nova Scotia border and north of Sackville. The Port Elgin and the LSD Bayfield/Cape Tormentine fire departments cover the area along the coastline of the Northumberland Strait and the LSD of Baie-Verte.
- In this entity, the municipalities provide many of the basic services for this area but most are located within Sackville and to a lesser extent, in the Village of Dorchester and Port Elgin. Sackville is a university town while Dorchester has a federal penitentiary. Other federal and provincial services are obtained from the nearby tri-community area of Moncton/Riverview/Dieppe.
- This proposed new municipal entity is the gateway to the Province; from the south for our Nova Scotian neighbours and from the east for our Prince Edward Island neighbours.

Profile of Proposed Municipal Entity E31 – R7

- This proposed new municipal entity would combine one village and a portion of a local service district. This new entity would have a population of 4,853 and assessed property values of approximately \$194 million. The attached statistical profile identifies the current administrative units that would be included in this proposed new entity.
- This proposed new entity is a vast rural area where the population in the village of Memramcook is predominantly francophone while the LSD portion is predominantly Anglophone.
- 21 per cent of the working population finds employment within this proposed entity. The majority of the working population commutes to the nearby municipalities of Dieppe and Moncton. The LSD in this entity is located within a few minutes of the Memramcook municipality.
- Much of the development is within the local service district and is mostly residential along the major roadway.
- The portion of the Dorchester LSD to be included in this new entity has a cost-sharing agreement in place to obtain fire protection services from the village of Memramcook and the Village of Dorchester. Memramcook has an arena and golf course used by the residents in this entity.
- In the early 1990s, the new village of Memramcook was created bringing together a village and several LSDs.
- The proposed entity would include Taylor Village, which is located to the South of the municipality within the Dorchester LSD and can only be accessed through the municipality due to its geographic location and the loss of a bridge which used to link it across the river to Dorchester while Calhoun Road is a small settlement adjacent to the TransCanada highway between Scoudouc and Memramcook.
- Memramcook does offer some services to this entity since it has a small business area, the Institut de Memramcook, as well as some recreational services. Federal and provincial services, as well as most healthcare-related services are accessed in the nearby cities of Dieppe or Moncton.

Profile of Proposed Municipal Entity E32 – R7

- This proposed reconfigured municipal entity would combine one city with part of one local service district (LSD). Combined, the population would be 18,958 with assessed property values of over \$1.56 billion. The attached statistical profile identifies the current administrative units that would be included in this proposed reconfigured entity.
- This proposed reconfigured entity is mostly urban towards the centre portion of the city of Dieppe and somewhat rural towards its outer boundaries and within the LSD. Its population is predominantly francophone within the municipality and predominantly Anglophone in the LSD.
- 29 per cent of the working population finds employment within this entity. This employment is mostly within Dieppe and is service-oriented. Other employment opportunities, also service-oriented, are located mostly within the city of Moncton.
- Most of the development within this entity is in Dieppe which has seen a very substantial population increase, relative to the rest of the province, in the last decade.
- The LSD of Greater Lakeburn has a cost-sharing arrangement in place to receive fire protection services from Dieppe.
- The residents of the LSD in this proposed entity access financial, postal, federal and provincial services in Dieppe or Moncton.

Profile of Proposed Municipal Entity E33 – R7

- This proposed reconfigured municipal entity would bring together one town and a portion of one local service district (LSD). Combined, this reconfigured entity would have a population of 20,318 and assessed property values of approximately \$1.1 billion. The attached statistical profile identifies the current administrative units that would be included in this proposed entity.
- This proposed reconfigured entity has both urban and rural characteristics. The population in this entity is predominantly Anglophone.
- 24 per cent of the working population finds employment within this entity. Many residents of this area are employed in the neighbouring municipalities in the manufacturing, construction, education, wholesale and retail areas, as well as in the public sector.
- The LSD of Coverdale is largely rural residential with the majority of its development along Route 114 and the Petitcodiac River. In the Town of Riverview, there has been some commercial development along its main thoroughfare (Route 114).
- There is currently a cost-sharing agreement between Riverview and the Province to provide fire protection services to the Coverdale LSD. This LSD also cost-shares on the Greater Moncton Pest Control Commission.
- Riverview provides financial and postal services to the adjoining LSD of Coverdale. Some government services are available within Riverview but most of them are available from Moncton.
- In summary, this proposed entity is best described as a bedroom community to the cities of Moncton and Dieppe. Its affiliation to Moncton has been made easier with the construction of the Gunningsville Bridge which provides easier access to this LSD.

Profile of Proposed Municipal Entity E34 – R7

- This proposed new municipal entity would bring together three villages, four local service districts (LSD). Combined, this new entity would have a population of 4,983 and assessed property values of approximately \$206 million. The attached statistical profile identifies the current administrative units that would be included in this proposed new entity.
- This proposed new entity has mostly rural and coastal characteristics and is located along Chignecto Bay. The majority of its population is Anglophone.
- 33 per cent of the working population finds employment within this proposed new entity. Employment that does exist within the proposed entity is linked mostly to tourism, fisheries and forestry. The Hopewell Rocks, Cape Enrage and Fundy National Park are the three major tourism destinations located within this entity.
- The majority of development is mostly linear and located along Routes 114 and 915 and more concentrated settlement is located in the villages of Alma, Hillsborough and Riverside-Albert.
- In this entity, the LSDs cost share for fire protection with their neighbouring municipalities. More specifically, a portion of the Harvey and Hopewell LSD cost share on community and fire protection services with the Village of Riverside-Albert. The LSD of Alma and the other portion of Harvey cost share on fire protection with Alma, Hillsborough Parish LSD and the northern portion of Hopewell Parish LSD cost share on fire protection services with Hillsborough.
- The three villages within this entity offer financial, postal and some basic services to their surrounding communities. Federal, provincial and health care services are accessed mostly in the nearby City of Moncton.
- This proposed new entity has many common characteristics primarily due to its geographic location on the southern shore of the province. It offers the picturesque scenery typical of coastal and rural countryside communities. These characteristics make this area a very popular tourism destination.

Regional Service District 8

Regional Service District 8 - Profile

- Located in the south-central part of the province, this region, which includes the majority of the area served by the Kings County Region Solid Waste Commission, is characterized by suburban/rural communities. It includes one town, two villages and 10 local service districts (LSD).
- This region has a total population of 20,054 and combined assessed property values of approximately \$1.0 billion. Currently, 65 per cent of the population resides within the unincorporated areas and 35 per cent of the population resides within municipalities.
- In terms of the two official languages, 97 per cent reported English as their mother tongue, with one per cent reporting French as their mother tongue.
- 80 per cent of the working population lives and works within this region. The economic base of this region is supported primarily through natural resource-based industries (including forestry, mining and natural gas production), agriculture, tourism, service industries and retail businesses.
- Communities within this region are cost sharing on solid waste through the Kings County Solid Waste Commission. As for economic development, the majority of the region is currently served by Enterprise Fundy, with two LSDs served by Enterprise Central NB. Presently the LSDs, the Village of Norton and the Village of Sussex Corner receive land use planning services from the Royal District Planning Commission. Sussex provides its own land use planning services.
- Policing in the region is provided by the RCMP through various agreements. In terms of fire prevention and suppression services, there are currently 9 separate fire departments (two municipal, and seven LSDs serving the region).
- Within Regional Service District 8, there would be two newly constituted municipalities, with populations of 4,822 and 15,232. The attached statistical profile and map identifies the new municipal entities that would be included in this proposed Regional Service District.

Profile of Proposed Municipal Entity E35 – R8

- This proposed new municipal entity would bring together one town, one village, six local service districts (LSDs) and parts of two others. Combined, this new entity would have a population of 15,232 and assessed property values of approximately \$775 million. The attached statistical profile identifies the current administrative units that would be included in this proposed new entity.
- This new municipal entity is a rural/suburban region which has a population of primarily Anglophone residents dispersed throughout the area. All the LSDs in this entity tend to be very rural especially as you move further out from the municipalities.
- 86 per cent of the working population finds employment within this newly defined area and the majority of residents are employed in the Town of Sussex.
- Development in this area is located both within the Town of Sussex and in the surrounding LSDs; primarily service-type industries are located in the town. The Potash Company of Saskatchewan has mining operations in the LSD of Cardwell and another non-operating site in the LSD of Hammond. Corridor Resources is actively exploring and producing natural gas in the Cardwell LSD. ID Irving Ltd. operates a sawmill adjacent to the Town of Sussex's boundaries in the LSD of Sussex. This area is a major farming community in the province and many service industries cater to this industry.
- The Town of Sussex Fire Department provides fire services to the Village of Sussex Corner and the LSD of Waterford as well as portions of the LSDs of Studholm and Sussex. There are LSD fire departments in Cardwell, Hammond, Havelock, Johnston and Studholm. The LSDs of Studholm and Sussex presently contribute through their LSD taxes to the Sussex Regional Library and they, along with the LSDs of Cardwell and Waterford, voted to contribute to a new indoor pool facility in the Town of Sussex.
- The Town of Sussex recently voted on a plebiscite question during the May 2008 municipal elections to explore amalgamation with the Village of Sussex Corner. Also, there has been a request put forth to explore the establishment of the LSDs of Sussex, Studholm, Waterford, Hammond and Cardwell as a rural community.
- The Town of Sussex has a post office, financial institutions, doctors' offices, two shopping malls, several restaurants, schools, both federal and provincial government facilities, including a hospital. Poley Mountain Ski hill is located in the LSD of Waterford and one of the two major accesses to Fundy National Park is through this area. The majority of residents tend to migrate to the Town of Sussex for shopping, dining and entertainment.
- In summary, this new entity would be a centre between Saint John and Moncton that has major mining, farming and forestry industries as well as being a gateway to Fundy National Park and the new Fundy Trail Parkway.

Profile of Proposed Municipal Entity E36 – R8

- This proposed new municipal entity would combine one village and four local service districts (LSDs). Combined, this new entity would have a population of 4,822 and assessed property values of approximately \$224 million. The attached statistical profile identifies the current administrative units that would be included in this proposed new entity.
- This new entity, which has mainly rural components, has a population of primarily Anglophone residents dispersed in clusters over the area. It could be considered as a rural bedroom community nestled between Hampton and the Town of Sussex.
- 28 per cent of the working population finds employment within this newly defined entity while the majority of residents are employed either in The City of Saint John or in the Town of Sussex.
- Development in this new entity is mostly along major roadways and is based on either the farming or forestry industries; there is a cedar sawmill within the Village of Norton.
- The Village of Norton Fire Department provides fire protection services to the LSDs of Norton, Studholm and Sussex. There is an LSD fire department in each of the LSDs of Wickham and Springfield. The fire department in the LSD of Springfield provides service to the LSD of Kars and a portion of the Village of Norton. The LSDs of Springfield and Kars also contribute through their LSD taxes to recreational services and facilities in their communities.
- A few years ago, there was some initial interest expressed in forming a rural community for this entity.
- The Village of Norton has a post office, financial institution, restaurants, a school and a few convenience stores. The LSD of Springfield has both an elementary and a regional high school with an indoor swimming pool located within the elementary school building. The majority of residents tend to migrate to either the Town of Sussex or The City of Saint John for shopping.

Regional Service District 9 - Profile

- Located in the southern part of the province, this region, which is based upon the current boundaries of the Fundy Region Solid Waste Commission, is characterized by substantial urban, suburban and rural settlements. Anchored by The City of Saint John, it also includes four towns, one village and 11 local service districts (LSD).
- This region has a total population of 121,545 and a combined assessed property value of approximately \$7.61 billion. Currently 14 per cent of the population resides within the unincorporated areas and 86 per cent of the population resides within municipalities.
- In terms of the two official languages, 92 per cent reported English as their mother tongue, with five per cent reporting French as their mother tongue. Saint John is subject to the requirements of the *Official Languages Act*, which imposes specific requirements for providing a certain level of services in both official languages.
- 98 per cent of the working population lives and works within this region. The economic base of this region is well diversified and includes a wide variety of businesses related to a working port, oil refining, an LNG terminal, nuclear power generation, fisheries, agricultural, hospitality / tourism, service and retail sectors.
- Communities within this region are cost sharing on solid waste operations through the Fundy Region Solid Waste Commission. As for economic development, the region is currently served by Enterprise Saint John (representing The City of Saint John, Rothesay, Quispamsis, and the Village of St. Martins) and Enterprise Fundy (which includes Hampton and the LSD of Kingston). St. Martins is a member of the Royal District Planning Commission, while the other five municipalities provide their own land use planning services. The LSDs in this region receive land use planning services from either the Rural District Planning Commission or the Royal District Planning Commission.
- Policing is provided by three forces in the region. Saint John has its own local police force. Rothesay and Quispamsis have a shared force, with the remainder of the region receiving policing services from the RCMP through various agreements. In terms of fire prevention and suppression services, there are currently 13 separate fire departments (five municipal and eight LSD) serving the region.
- Within Regional Service District 9, there would be one reconfigured municipality and four newly constituted municipalities, with populations varying from 4,785 to 70,133. The attached statistical profile and map identifies the new or reconfigured municipal entities that would be included in this proposed Regional Service District.

Profile of Proposed Municipal Entity E37 – R9

- This proposed new municipal entity would bring together one village and three local service districts (LSDs). Combined, this new entity would have a population of 4,785 and assessed property values of \$179 million. The attached statistical profile identifies the current administrative units that would be included in this proposed new entity.
- Located south and east of The City of Saint John, this new entity is mostly rural and has a population of primarily Anglophone residents.
- Nine per cent of the working population finds employment within this newly defined area and the majority of residents are employed in Saint John. Though many from this area would be employed by Saint John-based businesses and public sector organizations, there is some employment within the coastal Village of St. Martins. Tourism is a major industry in St. Martins; it is the southern gateway to the Fundy Trail Parkway. There is also a small shell-fishing industry based out of the village.
- Most development in this entity is located on the outskirts of Saint John and St. Martins with numerous subdivisions located between the city's boundaries along Route 111 to the Village.
- The St. Martins Fire Department provides fire services to the LSDs of Fairfield and St. Martins as well as recreational services to the LSD of St. Martins on a cost shared basis. There is also a fire department in the LSD of Simonds and the fire hall is actually located within the limits of Saint John.
- In 2005, there were preliminary discussions initiated with representatives of this proposed entity to become a rural community consisting of these entities or portions thereof.
- Within this new entity, St. Martins provides postal services as well as a grocery store, doctors' offices, a small hardware store and seasonal tourism venues. Federal and provincial services are accessed outside this entity, and primarily in Saint John.
- This new municipal entity can best be described as an unspoiled tourist destination located along the southern coastline of the province on the Bay of Fundy and with the completion of the Fundy Trail Parkway will be the south-western gateway from Saint John eventually leading to Fundy National Park.

Profile of Proposed Municipal Entity E38 – R9

- This proposed new municipal entity would bring together one town and two local service districts (LSDs). Combined, this new entity would have a population of 7,995 and assessed property values of \$388 million. The attached statistical profile identifies the current administrative units that would be included in this proposed new entity.
- Located northeast of The City of Saint John, this rural / semi-rural entity has a population of primarily Anglophone residents.
- 27 per cent of the working population finds employment within this newly defined entity. The majority of the working population is employed in Saint John. There are as well a growing number of residents that are employed in the Sussex area at the Potash Company of Saskatchewan mine. Though many from this area would be employed by Saint John-based businesses and public sector organizations, there are strong affiliations with the town of Hampton, which provides some employment opportunities in its business sector.
- Most of the development in this entity is located within Hampton. There is residential development in the surrounding LSDs on the outskirts of the town where several residential subdivisions are located.
- The Hampton Fire Department provides fire services to portions of LSDs but there are fire departments in Upham and Nauwigewauk also. The Fairmont taxing authority receives wastewater service from Hampton but there are no shared recreational services; both Upham and Nauwigewauk receive funds from LSD taxes for their own recreational facilities
- In 2005, there was initially an interest shown by the LSDs in looking at a rural community surrounding Hampton and the town has made some inquiries into the potential annexation of a couple of small subdivisions adjacent to their boundaries.
- There is a post office and a shopping venue within Hampton, including a grocery store and two hardware stores. There are some provincial government services located in Hampton including Service New Brunswick and the departments of Health, Social Development, Natural Resources and Local Government. Hampton is also served by four doctors. The Kings County courthouse is also located in Hampton, but is scheduled to be closed after completion of the Justice complex in Saint John. The RCMP District 3 head office is located in Hampton.

- This proposed new municipal entity would bring together two towns, two complete local service districts (LSDs) and portions of two LSDs. Combined, this new entity would have a population of 30,894 and assessed property values of approximately \$2 billion. The attached statistical profile identifies the current administrative units that would be included in this proposed new entity.
- This new entity, located north of the City of Saint John, has some rural characteristics within the LSDs but both towns have suburban characteristics. The population in this entity is primarily English-speaking.
- A relatively small percentage of the working population (22 per cent) actually works within this entity. Employment that is available is service-oriented and is located within the towns of Quispamsis and Rothesay. Since this entity is close to Saint John, the majority of residents in this entity are employed in businesses and public sector organizations within the city.
- The vast majority of the development in this entity is residential and is located mostly within Rothesay and Quispamsis. It should also be mentioned that there has been some noticeable growth in the commercial sector in recent years.
- There has been local discussion initiated to consider the potential amalgamation of Rothesay and Quispamsis (prior to the 2008 municipal elections). In 1998, six communities in this area amalgamated into the two current towns of Rothesay and Quispamsis. A portion of the local service district of Rothesay (the community known as Wells) was also included in the newly formed towns.
- The Kennebecasis Valley Fire Department provides fire services to the Rothesay LSD and a portion of the Simonds and Hampton LSDs; there are two fire departments on the Kingston peninsula. Furthermore, the municipalities in this entity cost share some recreational services with Saint John, such as the Harbour Station facility. Policing services are provided to Rothesay and Quispamsis through the Rothesay Regional Police Force.
- There is a post office and several financial institutions, shopping malls and numerous businesses between Rothesay and Quispamsis, and are also home to several doctors' offices. Atlantic Health Sciences also operates a clinic out of Quispamsis. Federal and provincial services are generally accessed in Saint John.
- This new entity combines growing residential communities that offer a small town lifestyle but with an increasing number of services. The Kingston Peninsula is connected to this proposed new entity via a year-round ferry service to Quispamsis. A year round ferry service also connects this proposed entity, via the Kingston Peninsula to Grand Bay - Westfield and a summer ferry service connects it to the City of Saint John.

- This proposed reconfigured municipal entity would bring together The City of Saint John, one complete and three partial local service districts (LSDs). Combined, this new municipal entity would have a population of 70,133 and assessed property values totalling approximately \$4.65 billion. The attached statistical profile identifies the current administrative units that would be included in this proposed reconfigured entity.
- This proposed reconfigured entity has a mostly urban character near and within Saint John along with some rural characteristics in those communities furthest from the city. The population is primarily English-speaking although there is an increasing number of bilingual (French and English) and other ethnic populations.
- A high percentage (97 per cent) of the working population is employed in this entity. The majority of residents are employed in Saint John and at the Point Lepreau Nuclear Power Station located in the LSD of Musquash. The portion of the Simonds LSD that is included with this entity is actually in the Mispec area and can only be accessed by driving through Saint John.
- Several major economic projects are currently being developed for this entity. Residential development in this area is occurring mainly in the outskirts of Saint John while the city itself is experiencing non-residential development within its boundaries. The nuclear power station at Point Lepreau is a major employer but there is tourism and fishing along the Fundy coast.
- The Musquash Fire Department provides fire services to the LSDs of Musquash and a portion of the Lepreau LSD. It is also a first responder to the Point Lepreau nuclear power station in case of a fire or other emergency. The fire department's main facility is in Musquash with a sub station in Dipper Harbour in close proximity to the nuclear power station. There is also a recreational facility adjacent to the Musquash fire hall that is funded through LSD taxes. Saint John provides back-up services for the Point Lepreau Nuclear Power Station.
- In 2006, there was some interest expressed from the LSDs of Musquash and Lepreau to form a rural community.
- In this reconfigured entity, all financial and government services are provided in Saint John, while postal services are provided from Saint John and Lepreau.

Profile of Proposed Municipal Entity E41 – R9

- This proposed new municipal entity would bring together one town and three local service districts (LSDs). Combined, the population in this new entity would be 7,738 and the assessed property values would be approximately \$365 million. The attached statistical profile identifies the current administrative units that would be included in this proposed new entity.
- This new municipal entity has both rural and suburban characteristics. Its population is primarily English speaking.
- A small percentage (15 per cent) of the working population finds employment within this newly defined area. Much of this employment is linked to the business sector of the Town of Grand Bay-Westfield. The majority of residents in this entity work in businesses and public sector organizations located in The City of Saint John.
- Much of the development in this area is residential and located along Highway 102 and Route 7 between Saint John and the City of Fredericton. Development is restricted because of Camp Gagetown, a portion of which is located between the LSDs of Greenwich and Petersville.
- Grand Bay-Westfield provides fire services to a portion of the Westfield LSD. Both the LSDs of Greenwich and Petersville have their own fire departments. Recreation facilities in Grand Bay-Westfield are cost shared by the town and Greenwich and a portion of the LSD of Westfield. Completed in 1997, the River Valley Community Centre in Grand Bay-Westfield combines arena facilities, a fitness centre, a physiotherapy clinic, and a multi-purpose room.
- Grand Bay-Westfield, incorporated in 1998, is comprised of the former Town of Grand Bay and the former Village of Westfield.
- Grand Bay-Westfield is the commercial service centre of an area that includes the LSD of Greenwich and a portion of the LSD of Westfield. There is a financial institution, doctors, a post office and several service facilities (hardware, grocery) in Grand Bay-Westfield. All other services, such as federal, provincial and healthcare services, are mostly obtained in Saint John.
- Grand Bay-Westfield acts as the commercial service centre to the rural and small communities of the lower Saint John River Valley as well as an access point to the major urban centre of Saint John.

Regional Service District 10

Regional Service District 10 - Profile

- Located in the southwestern part of the province, this region is served by the South West Solid Waste Commission, and includes three towns, three villages, and 20 local service districts (LSDs).
- This region has a total population of 29,160 and combined assessed property values of approximately \$1.67 billion. Currently, 56 per cent of the population resides within the unincorporated areas and 44 per cent of the population resides within municipalities.
- In terms of the two official languages, 96 per cent reported English as their mother tongue, with two per cent reporting French as their mother tongue.
- 90 per cent of the working population lives and works within this region. The economic base of this region includes businesses related to such industries as the fisheries, aquaculture, forestry, financial institutions, tourism and retail.
- All communities within this region are cost sharing on solid waste operations through the South West Solid Waste Commission. As for economic development, the majority of the region is currently served by Enterprise Charlotte, while McAdam is served by Enterprise Central NB. The LSDs in this region receive land use planning services from the Rural District Planning Commission. The Rural District Planning Commission is established for LSDs only. Municipalities in the area provide their own land use planning services, as a regional District Planning Commission has not been established for this area.
- Policing is provided in the region by the RCMP through various agreements. In terms of fire prevention and suppression services, there are 18 separate fire departments (6 municipal, and 12 LSD) serving the region.
- Within Regional Service District 10, there would be five newly constituted municipalities, with populations varying from 1,056 to 12,693. The attached statistical profile and map identifies the new municipal entities that would be included in this proposed Regional Service District.

Profile of Proposed Municipal Entity E42 – R10

- This proposed new municipal entity would bring together one village and one local service district (LSD). Combined, this new entity would have a population of 2,650 and assessed property values of approximately \$153 million. The attached statistical profile identifies the current administrative units that would be included in this proposed new entity.
- This proposed new entity has a cluster of small isolated islands with rural characteristics. The islands of Grand Manan and White Head are inhabited, while the others are not. This entity has a primarily Anglophone population.
- A relatively high percentage of the working population (92 per cent) finds employment on these islands. This employment is linked mostly to the fisheries and the tourism sectors.
- There is some residential development along the major roadways within this entity. The Village of Grand Manan, which encompasses the entire island of Grand Manan, has recently seen some commercial development relating to the tourism sector.
- There is a fire department in the village of Grand Manan, and one in the LSD of White Head Island. Currently, and out of necessity, the LSD of White Head Island is included in Grand Manan's emergency plan.
- The island of Grand Manan was incorporated as a village in 1995, which involved the amalgamation of three villages and two LSDs. The LSD of White Head Island was excluded from this restructuring.
- Although there is one general store on White Head Island, residents must go to Grand Manan for their basic needs and some government services. All other services are obtained from the mainland of New Brunswick, which is 1.5 hours by ferry.
- The attachment of this entity to other islands (e.g., Campobello or Deer Islands) or to the mainland of New Brunswick to form a larger municipal entity would not be practical, and from a servicing and governance point of view, would be very difficult to administer.

Profile of Proposed Municipal Entity E43 – R10

- This proposed new municipal entity consists of one local service district (LSD) and stands alone as an entity due to its limited accessibility. It has a population of 1,056 and assessed property values of approximately \$100 million. The attached statistical profile provides further details on this proposed entity.
- This proposed municipal entity, which is known as a tourist destination, has the typical rural and coastal characteristics of an island. Its population is primarily Anglophone.
- The entire working population finds employment in this entity since it has a number of commercial operations located on it, most focusing on the fishing and aquaculture industries. There are a number of small businesses located on the island, although many are seasonal, based on the tourist sector. Also located on the island are the Herring Cove Provincial Park, which includes a high standard golf course, and the international park which is the location of the summer home of past President F. D. Roosevelt.
- Due to its fragile nature as an island and its access through the United States, Campobello maintains its status as a tourism destination with some development in summer homes.
- In recent years, with property assessment values having increased substantially, there are a number of residents who have become more vocal in their desire to incorporate the island.
- There are some provincial and federal offices located on this island. They include a fisheries office, a small RCMP detachment, a post office, a dedicated ambulance and a medical clinic. The Campobello Consolidated School is a K-to-12 school. Campobello has its own fire department, which has a strong working relationship with its sister department in Lubec, Maine.
- Residents on Campobello most often have to travel to St. Stephen for their government services. This is a particular challenge for them, considering they must cross into the US and back into Canada at St. Stephen, to receive services. This involves a return trip of approximately two hours.
- In summary, Campobello is known as a tourism destination and is best known as the location of the summer home of President Franklin Delano Roosevelt. The summer home is now an international park, jointly maintained by a Board of Governors, made up of Canadian and American citizens.
- The attachment of this entity to other islands (e.g., Grand Manan, White Head or Deer Islands) or to the mainland of New Brunswick to form a larger municipal entity would not be practical, and from a servicing and governance point of view, would be very difficult to administer.

Profile of Proposed Municipal Entity E44 – R10

- This proposed new municipal entity would bring together one town, one village, five complete and one partial local service district (LSD). Combined, this new entity would have a population of 8,625 and assessed property values of approximately \$457 million. The attached statistical profile identifies the current administrative units that would be included in this proposed new entity.
- Commonly known as 'eastern Charlotte County,' this new entity is mostly rural in nature with a predominantly Anglophone population.
- A relatively high percentage (84 per cent) of the working population finds employment within this proposed new entity. This area includes a pulp mill, a fish plant, the aquaculture industry and a variety of small businesses. There is one industrial park in this entity.
- Much of the development in this new entity is within the LSD of Pennfield, which is seeing both residential and commercial construction, along with a number of subdivisions being established along Route 1.
- In this new entity, the two municipalities have their own fire department, as well as the LSDs of Pennfield, Fundy Bay, Saint George and West Isles. The Town of St. George provides fire protection to an area of the LSD of Saint George.
- In recent years, there has been some preliminary discussion for more shared services, particularly in the area of recreation and fire protection. Currently, the municipalities of St. George and Blacks Harbour have a joint emergency management plan.
- Both Blacks Harbour and St. George have a number of provincial and federal government services. The LSD of Pennfield has its own post office and elementary school. Residents in the LSDs consider Blacks Harbour and St. George as service centres for their basic needs.

Profile of Proposed Municipal Entity E45 – R10

- This proposed new municipal entity would combine one town and five local service districts (LSDs). Combined, this new entity would have a population of 4,137 and assessed property values of approximately \$380 million. The attached statistical profile identifies the current administrative units that would be included in this proposed new entity.
- This proposed new municipal entity has a mostly rural character (with the exception of the Town of Saint Andrews, which is a small residential tourist-oriented coastal community) and its population is predominantly English-speaking.
- A significant percentage (66 per cent) of the working population finds employment in this entity. Much of this employment is linked to the tourism industry, particularly in the LSDs of Bayside and Chamcook and the Town of Saint Andrews. There are a number of small tourism related businesses in this entity, as well as a federal biological research station and science centre.
- Much of the development in this new entity is residential and with the exception of development within the Town of Saint Andrews, is dispersed along the major roadways and coastal areas.
- Currently, there are contracts in place for fire protection services to the LSDs of Chamcook and Bayside with the Town of Saint Andrews. The town also provides fire protection services to a portion of the LSD of St. Patrick (20 per cent). The LSDs of Dumbarton and St. Patrick both maintain a small fire department to provide services to their own LSD. The LSD of St. Croix obtains this service from the Oak Bay Fire Dept. which is located in the St. David LSD outside this entity but within close proximity of the residents of St. Croix.
- In this new entity, most residents identify themselves with the "peninsula" area closely centering on the Town of Saint Andrews. The Town of Saint Andrews has some of the basic services including a financial institution and postal services as well as some government services. It is considered as the centre of the economic activity for this entity. Other federal and provincial services are obtained by most residents primarily in the nearby Town of St. Stephen.

Profile of Proposed Municipal Entity E46 – R10

- This new proposed municipal entity would bring together one town, one village, seven complete local service districts (LSD) and one partial LSD. Combined, this new entity would have a population of 12,693 and assessed property values of approximately \$580 million. The attached statistical profile identifies the current administrative units that would be included in this proposed new entity.
- This proposed new entity is located in western Charlotte County, and includes the southwest section of York County. It is primarily a rural area with some urban characteristics around The Town of St. Stephen. It is primarily an Anglophone entity, with a few francophone families dispersed throughout the area.
- A relatively high percentage of the working population (82 per cent) finds employment within this new entity. Most of the economic activity in the southwest York County area is linked to the wallboard plant located in the Village of McAdam. Also, there are a number of small businesses located along Route 3. St. Stephen is the economic centre for the region, with Ganong Bros. Ltd. and Flakeboard Co. Ltd. being the two major employers. St. Stephen also has several medium and small businesses, as well as one industrial park.
- Much of the residential development in this new entity has been in the LSDs surrounding St. Stephen. Over the past twenty years, there has also been some commercial development with a number of small businesses opening just outside the boundaries of St. Stephen, along Route 1.
- There are currently agreements in place between St. Stephen and the Province to provide fire protection to LSDs in close proximity to the town. As well, the LSDs of Saint David and Western Charlotte each have a fire department, with the LSD of Saint James having two. McAdam also has an agreement with the Province to provide fire protection to the LSD of McAdam. The LSDs also participate in other services such as economic development, recreational and cultural centres.
- There has been interest expressed by St. Stephen to look at restructuring options with the surrounding LSDs.
- St. Stephen is the shopping and services centre of south-western New Brunswick, with a wide variety of retail, commercial, financial and government offices and institutions. It is the service centre for this entity although residents in McAdam also tend to commute to the City of Fredericton for some of their services.
- The Town of St. Stephen, the Village of McAdam and the surrounding LSDs are closely linked by their relationship with the St. Croix River, where history, cultural and recreational activities are shared.

Regional Service District 11

Regional Service District 11 - Profile

- Located in the central western part of the province, this region, which is based on the current boundaries of the Fredericton Region Solid Waste Commission, is characterized by substantial urban, suburban and rural settlements. Anchored by The City of Fredericton, it also includes two towns, nine villages and 30 local service districts (LSD).
- This region has a total population of 118,758 and a combined assessment base of approximately \$8.36 billion. Currently 40 per cent of the population resides in the LSD areas and 60 per cent of the population resides in municipalities.
- In terms of the two official languages, 88 per cent reported English as their mother tongue, with seven per cent reporting French as their mother tongue. Currently, Fredericton is subject to the requirements of the *Official Languages Act*, which imposes specific requirements for providing a certain level of services in both official languages.
- 99 per cent of the working population of the region works within the region. The economic base of this region is relatively well diversified and includes the public sector (government, hospitals, schools, military) natural resource based activities (forestry and some mining operations), some agricultural operations, and a wide variety of businesses relating to the transportation, hospitality/tourism, construction, service, technology and retail sectors.
- The region is currently served by Enterprise Central NB (primarily the more rural areas of this region) and Enterprise Fredericton (representing Fredericton, Oromocto, New Maryland and the LSD of Lincoln). Presently unincorporated areas in this region receive land use planning services from the Rural District Planning Commission, while municipalities provide their own land use planning services.
- Policing is provided by two forces in the region. The City of Fredericton has its own local police force. The remainder of the region receives policing services from the RCMP. In terms of fire prevention and suppression services, there are currently 18 separate fire departments (10 municipal and eight LSD) serving the region.
- Within Regional Service District 11, there would be one reconfigured municipality and three newly constituted municipalities, with populations varying from 8,458 to 78,999. The attached statistical profile and map identifies the new or reconfigured municipal entities that would be included in this proposed Regional Service District.

Profile of Proposed Municipal Entity E47 – R11

- This proposed new municipal entity would bring together the Town of Oromocto, the Villages of Gagetown, Fredericton Junction and Tracy and 8 local service districts (LSDs). Combined, this new municipal entity would have a population of 20,513 and assessed property values totalling approximately \$1.3 billion. The attached statistical profile identifies the current administrative units that would be included in this proposed new entity.
- This new entity is located south of the City of Fredericton and is home to CFB Gagetown, eastern Canada's largest military training facility. This proposed reconfigured entity has a mostly urban character near and within Oromocto along with some rural characteristics in those communities furthest from the town.
- A high percentage (72 per cent) of the working population is employed in this entity.
- The Oromocto Fire Department provides fire services to the Lincoln, and portions of Burton, Manguerville, Noonan, Rusagonis and Sheffield LSDs. Fire protection is provided to the remainder of the area by the Fredericton Junction and the Hoyt fire departments.
- In this proposed new entity, most financial and postal services and some government services are located in Oromocto, as well as a public hospital, elementary, middle and high schools, industrial parks, a library, a military museum, a marina, a golf and curling club, motels and conference centre, public parks, and a weekly newspaper.
- This new entity combines growing residential communities that offer a small town lifestyle but with an increasing number of services.

Profile of Proposed Municipal Entity E48 – R11

- This proposed new municipal entity is comprised of the three villages of Chipman, Minto, and Cambridge-Narrows and seven LSDs.
- The population is primarily made up of Anglophone residents (91 per cent) with approximately 47 per cent of the working population employed within this newly defined area.
- Much of the development in this area is located in the three villages, the lake areas and along the provincial/local roads.
- Combined, the area consists of a population of 10,788 and assessed property values of approximately \$549 million.
- Fire protection is provided to the area from the three villages and the Canning Douglas Harbour fire departments. Local service delivery and cost sharing has been somewhat successful as residents of the area are contributing financially towards the operational costs of the area fire departments.
- The area serves its residents with schools, industrial parks, a library, museums, golf facilities, public parks, marinas, and a weekly newspaper.

Profile of Proposed Municipal Entity E49 – R11

- Located in the western part of New Brunswick, and referred to as the capital region, this proposed reconfigured municipal entity is comprised of the City of Fredericton, the villages of Harvey and New Maryland, nine Local Service Districts (LSDs) and portions of the LSDs of Maugerville, Douglas and Bright. The population consists primarily of Anglophone residents (87 per cent).
- Approximately 93 per cent of the working population is employed within this newly defined area. Employment is found in government, health care, education, tourism, agriculture, manufacturing and construction industries, wholesale and retail trades, finance, real estate, and other services. The area is rich in community services, activities and various specialty shops.
- This proposed reconfigured entity has a mostly urban / suburban character near and within Fredericton along with rural characteristics in those communities furthest from the city.
- Combined, the area consists of a population of 78,999 and assessed property values of approximately \$6.07 billion.
- Fire protection is provided to the area from the City of Fredericton, the Village of New Maryland, the Upper Kingsclear Fire Department, the Keswick Valley and the Nashwaak Valley Fire Department. Local service delivery and cost sharing has seen some success as residents are contributing financially towards the operational costs of the area fire departments. In addition, seven LSDs and the Village of New Maryland are contributing to shared recreation services with the City of Fredericton, which provides non-residents the same access to all the City's existing recreation services as City residents, without any non-resident user fees.

Profile of Proposed Municipal Entity E50 – R11

- This proposed new municipal entity is comprised of the Town of Nackawic, the Village of Millville and six LSDs. The population is primarily made up of Anglophone residents (91 per cent).
- Approximately 31 per cent of the working population is employed within this newly defined area. Employment is found in forestry, tourism, agriculture, manufacturing and construction.
- Much of the development in this area is located in the Town of Nackawic and along the provincial/ local roads.
- Combined, the proposed area consists of a population of 8,458 and assessed property values of approximately \$425 million.
- Fire protection is provided to the area by the two municipal departments as well as the Keswick Ridge fire department. Local service delivery and cost sharing has seen some success as residents of the area are contributing financially towards the operational costs of the area fire departments.
- This proposed new municipal entity would have schools, an industrial park, a library, museums, a marina, public parks, and several other recreational facilities. Health care and government services are located mostly within the City of Fredericton.

Regional Service District 12

Regional Service District 12 – Profile

- Located in the western part of the province, this region, which is based on a portion of the current boundaries of the Valley Solid Waste Commission, is characterized by semi-urban, suburban and rural settlements, and includes three towns, four villages and 21 local service districts (LSDs).
- This region has a total population of 27,664 and combined assessed property values of approximately \$1.4 billion. The majority of the population, approximately 67 per cent, resides in the LSD areas.
- In terms of the two official languages, 97 per cent reported English as their mother tongue, with two per cent reporting French as their mother tongue.
- 97 per cent of the working population living in the region works within this region. The economic base of this region is relatively well diversified and includes natural resource based activities (forestry and some mining operations), some agricultural operations, and a wide variety of activities relating to the transportation, hospitality/tourism, construction, technology, government and retail sectors.
- Communities within this region cost share on fire and some recreation services. As for economic development, the region is currently served by Enterprise Carleton NB. Presently unincorporated areas in this region receive land use planning services from the Rural District Planning Commission, while municipalities provide their own land use planning services.
- Policing is provided by two forces in the region. The Town of Woodstock has its own local police force. The remainder of the region receives policing services from the RCMP. In terms of fire prevention and suppression services, there are currently 12 separate fire departments (four municipal and eight LSD) serving the region.
- Within Regional Service District 12, there would be three newly constituted municipalities, with populations varying from 3,577 to 14,040. The attached statistical profile and map identifies the new municipal entities that would be included in this proposed Regional Service District.

- This proposed reconfigured municipal entity would bring together the Town of Woodstock, the Villages of Canterbury, Meductic and nine LSDs. This new municipal entity would have a population of 14,040 and assessed property values of approximately \$691 million. The attached statistical profile identifies the current administrative units that would be included in this proposed reconfigured entity.
- Located in western New Brunswick, this area is approximately 100 kilometres north of the provincial capital and is also adjacent to the state of Maine. The focal point of this proposed entity is the Town of Woodstock. The population is made up primarily of Anglophone residents (97 per cent).
- Approximately 81 per cent of the working population is employed within this newly defined area. This employment is linked primarily to agriculture, forestry, trucking, retail and service sectors located throughout the area.
- Residential development in this area is occurring in both the Town of Woodstock and the outlying areas. The Town of Woodstock is also experiencing non-residential development within its boundaries.
- Fire protection is provided to the area via five fire departments located in the Town of Woodstock, the villages of Canterbury and Meductic and the LSDs of Debec and North Lake. Local service delivery and cost sharing has been successful as several of the LSDs are contributing financially towards the operational costs of the Carleton Civic Centre located in the Town of Woodstock, and to the area fire departments.
- There is currently some interest being expressed by a few LSDs to form a rural community in the central portion of the county.
- Provincial and federal government services, financial institutions, various stores and a medical centre are located in the Town of Woodstock.
- This proposed new entity combines growing residential communities that offer a small town lifestyle but with an increasing number of services.

Profile of Proposed Municipal Entity E52 – R12

- Located in western New Brunswick, this proposed new municipal entity is referred to as the Central Carleton region and consists of one municipality, the Town of Hartland, and four Local Service Districts (LSD) and a portion of Wakefield LSD. The population is primarily made up of Anglophone residents (99 per cent).
- Approximately 61 per cent of the working population is employed within this newly defined area. This employment is linked primarily to the agriculture, forestry, trucking, retail and service sectors located throughout the area. Hartland is home of the famous “longest covered bridge in the world” and draws a large amount of visitors to the area.
- Much of the development in this area is located in the Town of Hartland and along provincial/ local roads in the area. Additional development is anticipated adjacent to the new Upper River Valley Hospital, located in Waterville.
- Combined, this proposed new entity would have assessed property values totalling approximately \$212 million and a population of 3,577.
- Fire protection is provided to the area by the Hartland, Florenceville and Glassville fire departments. Local service delivery and cost sharing has been successful as several of the LSDs are contributing financially towards the operational costs of the area fire departments. The Town of Hartland is currently researching the construction of a new sports complex and has approached the LSDs to participate in the planning of and subsequent financial contribution to its operational costs.
- In addition to financial institutions, stores and schools within the Town of Hartland, there are also some provincial and federal services located in the municipality.

- Located in the central western part of New Brunswick, bordering Maine and extending as far East as Juniper, this area, known as Northern Carlton County, is made famous by the McCain headquarters. This proposed new municipal entity, consists of three municipalities, the Town of Florenceville-Bristol, the Village of Bath, the Village of Centreville and eight local service districts (LSD). The population is primarily made up of Anglophone residents (97 per cent).
- Approximately 85 per cent of the working population is employed within this newly defined area. Employment is found in farming, forestry, manufacturing, transportation, and the food industry.
- Combined, the area consists of a population of 10,047 and an assessment base of approximately \$460 million.
- Fire protection is provided to the area by the Florenceville-Bristol, Centreville, Bath, Glassville and Juniper fire departments. Local service delivery and cost sharing has been successful as several of the LSDs are contributing financially towards the operational costs of the area fire departments.
- The area is also serviced with recreational facilities which include an arena, curling club, pools, baseball and soccer fields, located in the various municipal units.
- The new Upper River Valley Hospital is located south of this proposed entity.
- In addition to financial institutions, shopping and schools within the Town of Florenceville-Bristol, there are also some provincial and federal services provided in this area.
